

Email to a Conservative Party Candidate

September 2021

Is Climate Change Important?

Yes, it is so important that everyone, including Conservative Party supporters, should vote for the People's Party of Canada ("PPC"). It is just that important!!!

The PPC candidates have the wisdom and courage to reject the phony, CO₂-induced, climate-change alarmism. Unlike the platforms of the five parties allowed to participate in the debate, the PPC position on climate change follows the science:

<https://www.peoplespartyofcanada.ca/global-warming-environment>

The complete PPC platform is found at:

<https://www.peoplespartyofcanada.ca/platform>

In the days before the Canadian Federal Election on September 20, 2021, the Conservative Party candidate for the South Okanagan West Kootenay riding, Helena Konanz, made an appeal for PPC supporters to vote for the Conservative Party. Dr. Watson's email reply to Konanz, copied below, provides unassailable reasons why her appeal must be rejected.

It is not surprising that conservative-minded people get pushed left a small step at a time by the Liberals, the NDP, and the Greens, but that pushing to the left should not come from the Conservative Party if it is truly a conservative party.

Warren Watson

From: Thorpe Watson
To: Helena Konanz
Subject: Thanks for the Phone Call & Discussion on Climate Change
Date: September 9, 2021

Dear Helena,

Thanks ever so much for your phone call on September 8. It was much appreciated even though I failed to adequately convey my concerns.

I believe you have publicly stated that there are issues, other than climate change, requiring immediate attention. Apparently, my frequent emails have not convinced you that CO₂-induced climate change is a scientific fraud and must be denounced sooner rather than later. In fact, it appears that the Party is unaware that it is a dangerous, delusional superstition that makes all other issues irrelevant.

Please be assured that the foregoing is not political hyperbole. The demonization of CO₂ not only establishes a basis for the destruction of western economies but also poses a REAL THREAT to all plant and animal life on Earth!!!

I am sure you will agree that the premature transition to a carbon-free or low-carbon economy will condemn us to the grinding poverty of a Medieval lifestyle. It will be impossible to compete with China, India, and other countries that have not fallen victim to the anti-CO₂ cult. They are currently making major additions to their already massive, coal-fired, electrical power systems.

More frightening is the willingness of western governments, including Canada, to squander billions of dollars on capturing/removing CO₂ from

the atmosphere to achieve net-zero emissions and beyond; that is, 350 or 280 ppm atmospheric CO₂. Without a knowledge of basic physical chemistry, the implementation of such projects will accelerate when they discover that the removal of 100 tonnes decreases the atmospheric CO₂ content by only 2 tonnes. The oceans will replace the other 98 tonnes.

Consequently, about 6,000 GtC (Giga tonnes of Carbon) will have to be sequestered to reduce the CO₂ content from 416 ppm to 350 ppm. Such a CO₂ reduction will not only adversely affect crop production, but it will also result in the near extinction of terrestrial plant and animal life during the next, inevitable glaciation cycle. The atmospheric CO₂ content during previous glaciation cycles was reduced to 180 ppm, dangerously close to the level at which plant growth ceases, 150 ppm. The removal of 6,000 GtC will reduce the CO₂ content from 180 to 151 ppm.

You may take some comfort in believing that only fossil-fuel emissions will be sequestered or that it is not feasible to sequester such a massive amount as 6,000 GtC. Nevertheless, we must not underestimate the ingenuity of mankind. Some damn fool may stumble on a catalyst to accelerate the natural sequestration of CO₂ in the oceans. Please do not laugh because such an experiment was performed in the south Atlantic more than 10 years ago by a German-Italian group. Thankfully, it was unsuccessful.

In conclusion, we must cherish CO₂ and allow our emissions to replenish the severely depleted store of life-giving CO₂. Furthermore, we must take a stand against these anti-everything, pagan cults.

Best wishes in your election campaign,

Thorpe
