Dedication

This book is dedicated to people like my father, Thorpe Watson, who relentlessly fight the climate hoax. It is such an insidious ruse that it has conned pseudo conservatives into thinking sequestration is not a fool's errand. To prove that carbon dioxide is plant food necessary for photosynthesis and life on this planet would seem like a simple task. It is an undeniable and irrefutable fact.

The name change alone from global cooling to global warming to climate change would be the first argument for the defense of carbon. It should be a legal battle that is over and won in minutes, but because of the indoctrinated children who are now adults in power, the hatred (and ignorance) of fossil fuels and the desire for a socialist world order, it has been a losing battle that has spanned almost twenty years.

It is essentially a fight for the truth against people willing to scare children. The left strive to achieve their political goals with any means necessary. Aleksandr Solzhenitsyn, former Soviet political prisoner and author of *The Gulag Archipelago*, said that the best way to fight totalitarians is with the truth¹. There is no climate catastrophe and cheap energy is the best thing for everybody.

This book is \$2.99 CAD for the pdf version directly from the author or for the Kindle version on Amazon. This book is worth every cent of the \$2.99 CAD. The 20% tip is included.

All the other Watson books on Kindle are \$9.99 CAD. That is because of Kindle policy. If the price of the Kindle book is between \$2.99 and \$9.99, the royalty plan is 70%. If the price is \$10.00 or higher, the royalty plan is 35%. Therefore, if the price is \$20.00, the profit is the same as for \$9.99 because of the change in the royalty scheme. \$2.99 is the lowest price for the 70% scheme, but with the 35% scheme, the price can be \$0.99 to \$200.00.

Amazon also cuts into the royalty in the name of storage. They call it a delivery fee for a Kindle book which is delivered electronically. High quality photographs reduce the royalty on each book. That is why the Watson books, especially the travel books with lots of photographs, are all \$9.99 regardless of length.

Free Alberta Libre, the shortest Watson book is appropriately priced at \$2.99. The longer Watson books, like the nonfiction manuals for the card game of bridge called *Two Over One* and *Standard Canadian* and like the Watson novel, *The Nuu Runner: A Conservative Manifesto*, should be priced over twice as much as some as the shorter books like *Patagonia Papers*, *Papers in the Wastebasket* and *Poesia of Songs Unsung*, but to get the 70% royalty scheme, they are all on special at \$9.99. Thanks for the support.

Preface

The constant creep of the political system to the left is like a slow march backwards towards the edge of a cliff². Each move is deemed annoying but acceptable because citizens have more important concerns in their own lives. The creep forced by creeps has made the political parties unrecognizable from forty-five years ago. Yet people stay loyal to the party for which they have voted for years without realizing they have been abandoned.

It takes populists like Maxime Bernier and Donald J. Trump to provide a wakeup call that everything good about Western Civilization is at stake. The best things that have happened to this world are Christianity and fossil fuels, and they are both under attack. In order to be prosperous and to use fossil fuels, Alberta must declare that climate change is a hoax, and that the livelihood of Canadians depends on cheap energy.

They must ultimately declare their independence after they have won the propaganda battle. An independent conservative propaganda-free Alberta stands a chance while a socialist independent Alberta does not. It is a given that any socialist country (like Canada in 2025) cannot possibly be propaganda free and is headed to her demise.

Are conservatives mean people who do want, in the words of Mr. Strickland³, slackers to have a free lunch? Would the country be a utopian socialist dream if only the conservatives would allow it and step aside? Not a chance, and the only reason Canada has lasted as long as she has with such a debt is that the people lending the money are enviously eying the collateral. The USA gets away with her large debt for a similar reason, but they are (were) also the reserve currency of the world. Less of a debt would lower the interest rates and spur investment thus growing the economy⁴. Debt will eventually cause the collapse of the system.

Limited government and low energy costs with a free-market system with no regulations will make the happiest people. It has worked in the past, and will work in the future as long as people realize the futility of the socialist dream.

1. The Question

Should Alberta separate from Canada?

Yes (Oui) or No (Non)

For the good of Alberta, the answer must be yes. There is no question nor doubt that Alberta would be very prosperous on her own.

For the good of Canada, the answer is not clear.

If Alberta has to fight the federal government to use her fossil fuels (as is the case now), then it really does not matter. Canada is doomed. Alberta can go down with the ship or save herself.

Should Alberta ask a complicated referendum question? No, of course not. Although the issue is very complicated, the question must be simple and direct. Perhaps the following is best.

Should Alberta be her own country separate from Canada?

Yes (Oui) or No (Non)
