A Conservative Manifesto

Last Revised November 17, 2025

## Avertissement

The subtitle of “a conservative manifesto” should scare a lot of people away. The subtitle “Please do not read me” may be just as effective, unless the reader can be convinced that conservative is not the bad word that propaganda promulgators want people to believe. Agitprop and democratic plumbing (socialism, democratic or not) are the real evil words. Kindness, compassion, efficiency and utopia often accompany democratic plumbing lies concealing jealousy, laziness, substance abuse and the fear of an uncertain Godless future.

Ana Kasparian, a journalist of *The Young Turks* live streaming show<sup>1</sup>, said to Tucker Carlson that people on the left are “going to get very angry” I am talking to you<sup>2</sup>. She continued, “Well, I don't think that the political labels that we currently have in this country make much sense anymore<sup>3</sup>... A lot of Americans have been conditioned to be partisan and prioritize partisanship before truth. And I think truth is what will set us free genuinely. Truth will help us ensure that we have a better government. And I'm sorry, one side or the other does not have a monopoly on the truth, they just do not<sup>4</sup>.”

Conservative really means everything good from the past is conserved, people are economically prosperous, and the bureaucracy is not effectively in charge. It also means that the invisible hand of free market capitalism is not made visible and thus ineffective by regulatory handcuffs. Conservatism leads to cheap energy and lots of good jobs which create wealth. The worker should come first, and the middle class should be expanding not contracting or even disappearing entirely.

Contrary to what people are led to believe, government jobs do not create wealth. They create such an escalating burden that grows and grows until the system's collapse is inevitable. If the debt is expanding not contracting, there is already by far too many people at the public trough. A healthy economy ideally has no debt, but at the very least, the debt must be contracting. A huge bureaucracy with an expanding debt will back future generations into a corner from which they will not be able to extricate themselves. With limited government and no regulations, the economy will hum, and everybody will get an effective raise.

This novel is a fictional tale about a conservative dictatorship. By definition, whenever democracy evanesces, the battle for the truth has been lost first, and the dictator's reality becomes the verity. Having democracy is often the first lie of a dictatorship. The public may not even realize when the country lost democracy, and who really is in charge, but the few spilling the beans are labelled as conspiracy nuts. Ignorance really can be bliss, and people do not want their rapture disrupted. The disruptors will be found, discredited and neutralized.

Does the bureaucracy or the elected figurehead have the most say? The oblivious public also may accept curtailments in freedom from rising costs, from surveillance in the name of safety and from a loss of overall wealth caused by a bloated bureaucracy and a burdensome debt. The loss of freedom is a lot easier to recognize and judge than the loss of democracy. "People need to understand the true urgency because the globalists said they were going to collapse the world economy and use that for social control<sup>5</sup>." They "really believe that they do the right thing in their worldview to eradicate humankind to save humankind, whatever<sup>6</sup>."

This book starts with an avertissement which is a cool French word meaning "warning, brainwashing may possibly be reversed" in anticipation that fact checkers will confirm that this book of fiction is indeed fiction, provocative<sup>7</sup> fiction, so

<sup>7</sup>

dangerous that the preferred truths of the ruling class may be lost. The Associated Press (CTV News) reported that Charlie Kirk was a conservative activist killed September 10, 2025 at Utah Valley University (UVU) in Orem, Utah for his provocative<sup>8</sup> beliefs (faith, family, country<sup>9</sup>). As a result of words like that, a democratic plumber's head will go supernova. Baizuo which rhymes with buy-cow (not a meat lover's national anthem) is the sound made when this happens.

Baizuo is a Polonian (Chinese) word which means white liberal. Is it a term of endearment or derision? A person taken in by the climate hoax may think it is a term of endearment because, in their arrogance, they are fighting fossil fuels (oil) and plant food (carbon or carbon dioxide) to save the world. Therefore, the world had better appreciate their efforts. They would rather be destitute and last in the new world order than dead from the fictitious climate catastrophe. Without cheap fossil fuels, being last and destitute is an easy reality and the wealthy are no longer so far ahead. In a socialist society, nobody is "unfairly" ahead because everybody is tied for last place.

The leader of Polonia just smiles when he is asked about his climate goals and tells the Baizuo what they want to hear. He does not want to wake them up. He wants his country to be the best place to live, and he does not care that the West is willing to throw away their status in the name of plant food. When the Baizuo has left the room after the latest meeting, the leader exclaims, "What Baizuo!" and then asks his advisors if the new coal fired plants are still on schedule. "Two per week<sup>10</sup> and they know it. What Baizuo!"

Does this book state  $2 + 2 = 5$  or  $2 + 2 = 3$ ? So what if it did? No one would care. They may even feel good about their own poor math skills. However, what the

<sup>8</sup> Suspect in Charlie Kirk killing became more political, opposed activist's views, authorities say, By The Associated Press, CTV News, Published: September 12, 2025 at 5:29AM EDT, Updated: September 12, 2025 at 8:49PM EDT, Retrieved September 12, 2025 from <https://www.ctvnews.ca/world/article/suspect-in-charlie-kirk-assassination-expressed-opposition-to-conservative-activists-views/>

<sup>9</sup> Charlie Kirk: An American Original, Narrated by Jesse Watters (Not the prodigal son of Maxine Waters which she would deny regardless), Fox News, Saturday 4:00pm PT, September 13, 2025, Laura Ingraham at the 27 minute mark of the hour-long special (with commercials) said faith, family and country in that order were most important to Charlie Kirk.

<sup>10</sup> Simon, Julia, China is building six times more new coal plants than other countries, report finds, March 2, 2023, 6:00 AM ET, NPR Environment, Retrieved April 8, 2025 from <https://www.npr.org/2023/03/02/1160441919/china-is-building-six-times-more-new-coal-plants-than-other-countries-report-fin>

democratic plumbers (socialists) really care about is the truth which exposes their lies. They are full of what plumbers get rid of when they think socialism will work if done properly within a democracy. Even a simpleton knows that if the truths were told, democratic plumbing would never be accepted by the masses.

Whenever a system gets flushed down the proverbial toilet, people known as democratic plumbers are involved in the clandestine revolution. They cannot stand a viewpoint contrary to their own. They fight to establish their truth as the real verity and label anything contradictory as misinformation, disinformation or even mal information (simply mdm info). Misinformation is a lie, but the spreader is under the false impression it is true. Disinformation is also false, but the spreader knows it is a lie. Mal information is true but used out of context to mislead<sup>11</sup>. Agitprop and fake news encapsulate these terms.

Democratic plumbers are the modern day kingmakers. There is nobody named Warwick, but the devastation they cause is far worse than that done by the War of the Roses, the one in England not Pasadena<sup>12</sup>. Since the 1400s, mankind has gotten better with medicine, food production and other positive aspects necessary for a comfortable life, but unfortunately has also gotten better at destruction. The ruination and anarchy, these advanced kingmakers cause, almost always lead to a dictatorship.

Is a plumber a bad thing? No, of course not, the trades are noble. While, on the other hand, a useless university degree on how to hate the modern world is not only far from noble, but it also creates these democratic plumbers foolishly wondering if their debt could be inflated away. This is the same modern world that reduced poverty from 95% in 1800 to 5% in 2020<sup>13</sup>. That is something to be lauded not hated.

<sup>12</sup> The Late Captain Pierce, *M\*A\*S\*H*, Alan Alda (Director and the only star of the four actors with the show for eleven seasons, who appeared in every episode of eleven seasons), Larry Gelbart and Gene Reynolds (Producers), 4th Season, 4th episode, 20th Century Fox Television, October 3, 1975 (first aired).

<sup>13</sup> Milei, Javier, President of Argentina, His full speech to the World Economic Forum in Davos, Switzerland, January 18, 2024, National Post, Retrieved January 19, 2024 from <https://www.youtube.com/watch?v=4z44XP4u9Xs>

The fact checkers may label this book as antitrades, but it is far from that. It just happens that two good words like democratic and plumber combine to make a bad compound word. Humble pie, meaning humiliation, is another example<sup>14</sup>. Iron maiden, a torture device not just to Barry Manilow fans, is another.

It is so important to fight propaganda with the opposing point of view and comedy may be the best tool to do that. Therefore, hats off to people who realize that opposites like all that's best of dark and bright<sup>15</sup> are needed in almost everything, even in politics. Nobody should dispute that comedy, the opposite of gravity, is desperately needed in tough times. This book is a good read for those people who are either old school liberal or conservative in thought desperately needing a laugh.

With religious conviction, democratic plumbers are sure of their veracity and always will be. They show their grief every time toilet paper is dispensed over, not under the roll. For that reason, they think comedic writers like to be wide of the mark. It is funnier that way.

Is comic relief achieved by creating lies or pointing out those who believe lies to be the truth? Learning becomes impossible when one refuses to be wrong and calls anything which challenges his position as mdm info or bad thoughts. This just closes the unknown frontier of knowledge. Learning and books are the spice of life and should never be permanently closed.

A book's best fate is to be placed in libraries everywhere, to be translated and even to be read by school children. However, its worst fate is not simply to be discarded but to be used to catch the bowel movements of pets. The physical pages could line a bird cage. Birds like something to read when they are on the throne of thought too. Do birds end up in prison because of bad thoughts? Do digital copies deprive pets of that right?

<sup>15</sup> The third line of *She Walks in Beauty*, a famous poem by Lord Byron or George Gordon, an English poet who has two streets named after him in Warfield, BC.

Hopefully, the thoughts in this fictional account do not lead to a Polonian prison in Ottawa, Canberra, Wellington, New Delhi, Pretoria (administrative or executive), Cape Town (legislative), or Bloemfontein (judicial). That is a common capital idea of wealth.

A writer would be pleased with wealth or even to be associated with something named after Marco Polo<sup>16</sup>, but not prison. Polo was a Venetian merchant, explorer and writer who brought knowledge of the Far East to the public. Every writer who disparages democratic plumbing needs a cowriter such as Anon or Albie Fine to take the heat. Two cowriters are needed in case one gets cancelled. Will the cancel culture know that the cowriters are fake? That is unlikely because such a reader will stumble over the words, a conservative manifesto, and not read much past the cover.

---

<sup>16</sup> A Venetian merchant, explorer and writer who lived from 1254 to 1324 and travelled the Silk Road from 1271 to 129. He wrote the book, *Marco Polo, The Travels*. ## Dedication

This book is dedicated to conservative values such as God, family, free market capitalism and limited government or dumb government (replacing the antiquated term of government) as well as to those people who realize gifts from God such as intelligence mean nothing without hard work. An individual, who is much more important than the collective, must fight for his place in the world, but he must not fight God's will. This fictional tale is also dedicated to travellers of both short and great distances as they find Divine Providence.

Can one imagine a world where God is important, the government is not, and counterpropaganda sets the record straight? Sadly, that may only exist in a work of fiction. When the media protects propaganda, the truth is labelled as conspiratorial and, sad but true, as propaganda itself. That is just the pot calling the kettle black, or in other words, Freudian projection.

What do aerodynamic engineers hate the most? They just loathe agitated propellers. Engineers like the facts, just the facts, not agitprop. Will the real propaganda ever step forward and be identified? Sadly, no. Aleksandr Solzhenitsyn said, "One triumphs over totalitarianism (democratic plumbing) by resisting lies<sup>17</sup>." That is extremely difficult to do, but must absolutely be done.

Having won the birth lottery and seen the success of his country thrown away, the author must also dedicate this book to authoritarian regimes controlled by a wise principled person who wrests power and decisions away from the foolish unscrupulous people who would throw success and prosperity away. "But we must save the environment." Take it from authority<sup>18</sup>, the environment is fine and is

<sup>18</sup> Watson, Thorpe (PhD) and Warren Watson (MAsc), *Misadventures with Carbon, Where the "Settled" Science Really Leads*, Trail, British Columbia, Canada: A Kindle Publication, 2019. It seems I am referencing myself but my book contains 530 endnotes. The argument that Climate Change Catastrophe is a hoax is well proven with those 62 pages of endnotes in the 232-page book. Retrieved April 6, 2025 from <https://watsongallery.ca/ClimateReality/MisadventuresBook/Misadventures.htm>

laughing in people's faces. The real battle cry should be: "We must save ourselves without more dumbgovernment because after God, humans come first." However, first, the truth must be saved. That will be a journey and a half which will be better if the wise words of Ronald Reagan are remembered. "If more government is the answer then it was a pretty stupid question<sup>19</sup>." Stupid is never far from the word government. It is built right into the word, hence the terms goovernment and dumbgovernment are quite appropriate.

This book is also dedicated to those who realize the importance of the trades and to those who achieve their career path without a penny of debt. A perfect Facebook post around 2020 when the Hidden Barrios Democrats passed bills to forgive student-loan debt, was as follows:

"Nobody talks about forgiving Trade School debt because they all learned a useful skill and can pay their own way."

---

<sup>19</sup> John Rustad, Leader of the Opposition in the Legislative Assembly of British Columbia and leader of the resurging BC Conservative party quoted Ronald Reagan at a meet and greet (whine and cheese with coffee and cookies and no wine and no cheese) in Castlegar, BC on Sunday June 22, 2025.

## Preface

This is the ultimate travel book. Traveling away from what one dislikes is good, but traveling to prove that home is best is practical. If the goobernment or media claims to be living in the best (or worst) country, can they be trusted or believed? Are they a goober? Goober is defined by Merriam-Webster as a peanut but also as a naïve, ignorant or foolish person<sup>20</sup>.

Anyone born in a great country is a winner of the birth lottery, and they should be extremely careful not to be a goober and throw the prize away. However, without travel, this fortune may not be recognized. The goobernment which spends foolishly to solely increase its power while expanding the debt is just playing with fire and is effectively throwing the prize away for future generations.

This tale follows Sam O'Shea, a nuu runner, who is a cry of SO'S. He grew up in a benign dictatorship on an island in the Gulf of St. Lawrence (le golfe du Saint-Laurent en français<sup>21</sup>), not like any autocracy anywhere or anytime. It was a nuu order. Nu is a homonym and yet a synonym of the word, new, thus explaining the first part of the book's title. It is very important to not drop a "u" from the title. In French, the Title would be "Un Nuveau Coureur," but the reader can decide if "Un Coureur Nu" is an appropriate title.

Just because things are not always so simple, Nu has another meaning because it is also an acronym. Sam's land is newly uncharted and unfound by propaganda. The citizens are told that they were the Stan Stan in the Stan Soviétique (the Soviet Union) which just proves once the media is dishonest, corrupted or controlled, the citizens can and will be told almost anything. People would be less likely to leave if they thought they were surrounded by territory less free and prosperous. The Stan Stan was doubly-poverty locked. They had to be better off than the doubly landlocked countries of Liechtenstein and Uzbekistan. Unlike those countries, the Stan Stan had an inland sea.

---

<sup>20</sup> Goober, Merriam-Webster Dictionary, Retrieved December 20, 2024 from <https://www.merriam-webster.com/dictionary/goober>

<sup>21</sup> Google Translate is used for most translations in this novel.

In reality, Sam's country is the opposite of a newly found land yet it is juxtaposed to Newfoundland, just off the Burin Peninsula. Some would never refer to it erroneously as Saint Pierre and Miquelon, an overseas collectivity of France, because the past is so easily ignored or rewritten. Despite this geographic proximity, it is completely isolated from the outside world. It is as if it has been given the boot, and on the map, it appears as if it has. It is lost to the world or unfound.

The word runner in the title is easier to explain. The speed at which the human race travels through the Milky Way<sup>22</sup> (many kilometres a second) is very much faster than a walk (a few kilometres an hour), so for simplicity's sake, people travel through the ether at a run. They are all runners, even sitting on a couch.

The fastest man, with world records in the 100 metre and 200 metre races, is Usain Bolt from Jamaica. He ran 100 metres in 9.58 seconds in 2009<sup>23</sup>. The fastest woman is the late American Florence Griffith Joyner who ran the 100 metres in 10.49 seconds in 1988<sup>24</sup>. Biology (God's will) does seem to make a difference and thank goodness for that. However, it is hard to believe that a couch potato, a sailor and the fastest man and woman all have almost the identical speed through the Milky Way. It is also incredible, but sad, a fast human could be late. Does that make a slow person really late?

No matter what an individual does with his life, each person runs a remarkably similar path cut through the Milky Way. However, it is the precise journey, with all its perturbations, that makes the passage an individual experience. This book involves travel that is a journey of runners together and apart.

Specifically, and first, the life journey and the realizations made by the main character Sam O'Shea are recounted. His reality is defined by what he is told through education and journalism which surprisingly is not always the truth. However, it is

always the leader's truth in a nondemocratic country which, of course, always claims otherwise. It is no secret that people are happier if they believe they are in a democracy. Sam finds himself in such a nightmarish country ruled by a dictator, supposedly benevolent, where companies run wild, and the undesirables are banned. That implies companies are desirable. What kind of fresh hell is that? Yet, he thinks it is okay because it is all he knows.

Second, the actual physical journey that Sam O'Shea makes through the Milky Way is described. Sam is a nuu runner because he travels virtually through the Golden journals which were mysteriously buried in his basement. He then travels with the aid of mental illness to the frontiers of thought, and finally, he uses conventional means of travel through the Maritimes and Southern Ontario.

SO'S is the modern day Marco Polo, a Venetian traveller in the 1200s who reached a land at the end of the Silk Road called Cathay. The movie titled, "The Adventures of Marco Polo" called Polo the first travelling salesman<sup>25</sup>. It was a wild place where rocks (coal) were burned as fuel. Cathay became the modern day Polonia, which is still in an epidemic, but recognizes the importance of burning coal to create energy. Without cheap energy, people cannot be happy. There is, of course, the energy death spiral in the MT Territories, a place where people, with empty lives, are far from happy.

Marco Polo (The Million) was imprisoned well after he returned from his travels for his role as a ship's captain in a war between Venice and Genoa. In prison, he recounted his travels to the scribe, Rustichello de Pisa<sup>26</sup>. Apparently, a leaning tower is not Pisa's only claim to fame. His stories got published as *The Travels of Marco Polo*, AKiA ("also known as" with an eye spying on the word use) *The Book of the Marvels of the World* and AKiA *Il Milione*.

Without a friend named Rusty, Sam writes about his own travels, and his writings keep him from the prison called homelessness. He is led to believe that his country

# **Part I: From Good Authority**

# 1. The Nuu Order

The year was 2132 not 2052. A good predictor of the future, George Orwell (1903-1950<sup>27</sup>), wrote *1984* in 1948. Not to insult any math whiz with simple math, but 2132 was chosen because it was twice 1066, a notable time in history with the Norman invasion of England. This is the country which has since brought English to the world and of course fish and chips, football (the modern version of the second century Polonian military drill called Tsu' Chu<sup>28</sup> or Cuju<sup>29</sup>), darts and warm beer. At one time, the Sun never set on the British Empire. That was well before darkness swept the world, and for a moment, it looked as though the Sun would never rise again.

The year 2132 was well after a time of massive upheaval bringing life on Earth to the brink of extinction that made the Norman invasion comparatively insignificant. A comet strike and the resulting cloud of dust blocking the Sun could not have been any deadlier. Up until that time, the runners, the dominant force, had used the Earth to suit their every desire. These were only ordinary desires, but they spiralled out of control resulting in the use of nuclear weapons, man's equivalent to a comet strike.

These weapons of war carried by sk52s, stealth kites, could unleash a force ultimately spiraling everything into a primordial soup that the runners could not survive. Weapons of war are indisputably awful but often have cool sounding names because the engineer creators pander to the generals in charge of appropriations.

Was this a herald, sounding the changing of the guard, last heard when the dinosaurs left this Earth, to be news fallen on lifeless ears? It was sad that the dinosaurs did not have warnings on their cigarette packages, but the mammals, at the time small animals, were happy to sell them their demise. If only the problem had not morphed

from selling cigarettes to selling weapons of war. Bigger mammals have bigger problems and bigger ideas of solutions.

Now, what could step into this most recent void and build back bitter? The general public becomes embittered when building back better is attempted by incompetents, and it should have been clear to everybody that the invisible hand<sup>30</sup> of free market capitalism cannot be replaced by a centrally-planned system without much hardship that results in scarcity and collapse<sup>31</sup>. What species would make the next ascent? That remains to be seen. However, any new ascent would have to wait because one area remained intact.

This was the Gaul of the troubled times known as the Confederated Union, the CU where the authorities can SEE YOU. It was a neo-confederate<sup>32</sup> country. It could be called the Utopian Society, but the initials US could be confused with the United States of the past. Were these the Undivided States or the Underdivided States of Avivica?

The small country of the CU was ruled by a capable leader known as the Benevolent One or the BO. So what if the leader had a body odour (bo) problem? At least, he was not senile, inept, incompetent, mentally incapacitated or lost in Hidden-Barrios (neighbourhoods). The BO knew how to exit the stage after a speech, knew his wife from his sister, and knew who was dead or alive. He also did not lose his train of thought, did not shake hands of a ghost, and did not sniff people's hair. The BO was also not beholden to anyone because they would expose his family's corruption. Can such a leader really exist? Yes, and his subjects were the fortunate runners and found themselves stuck in the middle of a big empty known as the miserable terrain or the

MT (empty) territories. Without democracy, the CU was considered by the leaders of the MT Territories to be an illegal enterprise.

The nuu order stood testament that good still could come out of nothing. Life could not only survive surrounded by inhospitable places, but it could also flourish, and be marked by freedom and happiness. Sam O'Shea won the birth lottery. He was fortunate to have been born after the troubled times and even more fortunate to have the rhymes of the cradle (roc). These rhymes gave the runners something to utter when, in their place, the wrong thing could have been thought or said. A rhyme that was sung, even in the key of off, was a roc musing or a roc sonic which eventually became known as rock music. Sam liked one rhyme in particular which he often repeated to himself.

He did not understand its meaning, but that was no different from most old poetry, AKiA (also known as) roctry, which was rhyming verse. Poetry changed from alliterative to rhyming as far back as the Battle of Hastings in 1066. The creation of the CU was just as transformative as the Norman invasion of England. The reason for the invasion was not to save democracy or to find weapons of mass destruction like carbon sequestration units but to improve the Anglo Saxons' poetry.

It was not until Elton John sung Rocket Man<sup>33</sup> in 1972 that people recognized that roctry and poetry were the same. Regardless, Sam knew that it stood as a reminder that he was in a fortunate state, the CU. He often recited it aloud. He monotonically sung it deliberately and slowly.

The CU sounds or the CUs words echoed in his ears.

In a world that has gone mad,  
There was no time to be sad.  
You did what you had to do.  
If you were caught, you'd be through  
when you find that you are through.

---

<sup>33</sup> Elton John, Bernie Taupin (Songwriters), Gus Dudgeon (Producer), Rocket Man sung by Elton John, Honky Château (Studio Album), Uni (US), DJM (UK), 1972.

Running, you will get what's your due.

The Benevolent One, to bring order to madness, was humane to those who did the right thing. However, he was also compassionate to those who erred, making their end swift. The Benevolent One had reimagined law enforcement, sanity, and happiness so that even a listless runner could get what he should have wanted living in the CU in the year 2132, two years after the latest in a very long line of predicted ends of the world. How many failed end-of-the-world predictions does it take for a citizen to stop believing them? Do they wear an emergency seatbelt when they perambulate? Do they wear a double mask and face shield when they are alone?

## 2. Order is Welcomed not Democrazy

Nuclear war brings forth images of conflagration and destruction, a state of complete disorder. The reds and oranges of the flames fade into the black and white scene of a nuclear winter which is replaced by the colourless scene of a classroom, far across the water from the mayhem. The noise of explosions and crackling fire fade into nothing except the scratching of a piece of chalk.

It became quiet and ordered which was extremely apparent when placed in direct contrast to the opposite state of chaos. The CU provided order which was such a comfort that the runners were not even concerned they were ruled by a dictator. People are very accepting of inconveniences during a pandemic or in the name of the environment, but to get order, they accept even more restrictions. When turmoil is replaced by peace and security, people let out a collective sigh of relief even when placed in collectives by the same people who created the ferment.

The students, in their black and white uniforms, sat rigidly at attention as expected in a dictatorship. Sam was sitting at the back of the class where he thought he could slouch. Because of his high marks, he had earned that right.

The komissar scribbled on the board. This was a nod to Polonia and the former Stan Sovétique which had komissars who were in charge of political education and loyalty<sup>34</sup>. The chalk was white, the board was black, and the scribbles were ordered. Above the blackboard, there was a colour photograph, a head shot with no colour, of a man in a plain cylindrical black hat. It looked exactly like a postage stamp. It was the leader of the CU.

If a colour photo were to be taken of the scene, it would be hard to tell that the photography was not a black and white Stieglitz (goldfinch in German<sup>35</sup>). There was not even a hint of colour. There was not even a little red from an apple which was

---

<sup>34</sup> Commissar, Merriam-Webster Dictionary, Retrieved April 19, 2025 from <https://www.merriam-webster.com/dictionary/commissar>

<sup>35</sup> Stieglitz, Google Translate, Retrieved July 28, 2025 from <https://translate.google.ca/?sl=en&tl=de&text=goldfinch&op=translate>

absent from the komissar's desk. Even the pink of the students' cheeks had paled from confinement to the bleached room.

No student was looking out a window. There were none, and if there had been one, no one would dare. The students could not even look at a clock. There was nothing to take their attention away from the lesson at hand. Even the walls were blank and white. The students were riveted to the lesson. The classroom may have looked boring, but the investigation of the frontiers of thought and knowledge was very exciting.

Would they lose social or benevolent points for any small transgression? No, but it was obvious that discipline was a huge part of learning, and the students were keen to learn. Through knowledge, happiness could be found. This was the class system of the CU. So nobody would forget, the motto was on a sign at the entrance to the class system.

The komissar spoke into the blackboard. He had a piece of chalk in one hand and an eraser in the other. He erased as he wrote to make more room for his scribbles. He spoke English with a French accent, and there was no emphasis on any particular syllable. All parts of a word were equal. There was no discrimination.

The komissar turned and pointed to the word democracy. "Today's lesson is on democracy which is comprised of two Greek words. 'Demos' mean people and 'cracy' means government or rule. Democracy is the rule by the people, regardless of intelligence or capability. It is truly a democrazy.

"We are lucky we do not have it because democracy does not work when the leader cannot manage a paper route, a lemonade stand or a popsicle-cart and belongs to the elite class with no actual compassion for the working man. It is even worse when his real compassion is for money under the table or for donations to his mother. It is like throwing a lot of coins into a fountain or a waterhole (trou d'eau<sup>36</sup>). That amounts to a lot of Carney Trubble.

---

<sup>36</sup> Google translate, Watering hole, Retrieved November 27, 2024 from <https://translate.google.ca/details?sl=fr&tl=en&text=trou%20d%27eau%0A&op=translate>

“Our beloved leader does not pretend. The CU is not a democracy. Winning a popularity contest is really no basis for finding a capable leader. Democracies do not work when people realize they can vote themselves free stuff, and incur a huge debt to do so. The high tax burden and the skyrocketing debt facilitate what seems like limitless government spending and control that will never be relinquished. Paying down the debt never happens because it reduces the social programs a politician can implement, thus reducing his effective bribes and consequently his fame and popularity. Therefore, it is not even a consideration.

“It is even worse when people, who cannot manage a small business and have the hubris to think they can, get elected to office. Politicians never stay in their lane and often get over their skis. Elections, after all, are really just popularity contests without guitars and without skill. Conservative leaders are not much better because they get pushed around by the bureaucracy, where the real power is.

“Even with free and fair elections, there can be no democracy without a free press which keeps the ruling class accountable. Once the press or the fourth estate sees its job as protecting the decisions of the ruling class, e.g. (Latin for *exempli gratia*, meaning “for example”<sup>37</sup>) a lockdown during a pandemic started by that very same ruling class or a vaccine which keeps the public compliant, injured and reliant on healthcare, democracy is lost and news is just propaganda or fake news. By the way, the first estate is the clergy, the second estate is the nobility and the third estate consists of the commoners<sup>38</sup>. Once the fourth estate is a propaganda arm of the ruling class, the first and third estates are irrelevant to the godless elites.

“Some people define democracy as a system in which the leader of the opposing party never gets elected by hook or by crook. If the propaganda machine can declare the opponent a bad person, half the battle is won, and it can be waged 24-7 and 365 outside the window for legal election debate. Declaring an opponent as Hitler or a

fascist just because he is the political opposition loses the meaning of the words (a goal of socialism) and insults the memory of the Holocaust victims.

“Hitler did love his country, but he was a socialist first of all because Nazi is short for National Socialist (**N**ational**s**ocialist<sup>39</sup>). If socialists are called the ult-right then that word also has no meaning. A better word is the ult-wipe referring to those who live where three-ply toilet paper is readily available because socialism is not. A democratically elected leader who hates his country is really no better than a dictator who loves his country, but the word democracy can be used in the brochures attracting investors and tourists.

“A side who wins by cheating, gets caught and faces no consequences will inevitably do it again. They will also pursue their enemies with lawfare. Those who escaped the Hidden-Barrios purges of the early 21<sup>st</sup> century to protect democracy helped populate the Stan Stan, the CU. Democracy back then was truly a democrazy.

“The CU does not have democracy in its name like some authoritarian countries such as the German Democratic Republic (East Germany before reunification) and the Democratic People’s Republic of Korea (North Korea). When the USA and Canada lost democracy, they became Vesputia affirming Democratic Care and the Democratically United Provinces Espousing Diversity respectively. VADC is a virtual analog to digital converter with analog being old school and digital being new school. This sounds like build back better. Duped, however, is also quite appropriate because swallowing propaganda was a national pastime. Would the leader be the duper in chief?

“After the Anschluss, similar to the annexation of Austria by Nazi Germany in 1938, all of North America (including Estados Unidos Mexicanos) became one enormous country, simply called Vesputia. This name paid homage to Amerigo Vespucci, an Italian explorer who realised he had reached a New World and not part of Asia<sup>40</sup>.

---

<sup>39</sup> Google Translate, National Socialist, Retrieved November 16, 2024 from <https://translate.google.ca/?sl=en&tl=de&text=national%20socialist&op=translate>

<sup>40</sup> Almagià, Roberto. "Amerigo Vespucci". Encyclopaedia Britannica, 1 Jan. 2024, Retrieved February 3, 2024 from <https://www.britannica.com/biography/Amerigo-Vespucci>

The Americas were named for him despite the fact he got to the Americas after many people including the Indians, the Vikings and Christopher Columbus.

“Vespucci was a better promoter and was not in the dark with regards to the Americas’ place in the world. People who make the maps often choose the names. If the Americas were named for the Natives, that would have been an exercise in futility because Native names have a predilection to being removed by racist haters of the native peoples. They do not want to see a single word like “Indian” because it makes their blood boil. Indian is such a romantic name because the first explorers thought they had found India. Duh!” The class laughed.

“The more a country changes names and maps, the fewer practical things can be taught and learned. Learning becomes even more problematic when the history books are written from fake news. Any news organization in favour of world order and socialism had to be outright liars to promote their political aims. Even Fox News was not a reliable news organization because they were afraid of awful lawfare and buried the enormous American election fraud of 2020. The moto of the election was: If you are dead, the Democrats really need your vote. The moto of the socialists is to use any means necessary. False propaganda or flat-out lies and cheating are just tools used in the name of democracy to erase democracy. A motto of the times was plausible deniability<sup>41</sup>.

“Was January 6<sup>th</sup>, 2021 a false flag FBI operation created by the Blob of Bureaucracy (B.o.B) spearheaded by Ray Epps<sup>42</sup> to deflect attention from the election fraud and to imprison enemies of the democratic plumbers? No, of course not. That would be a conspiracy theory. However, it was suspiciously like the Nazi’s Reichstag fire. The democratic plumbers learn from history not to avoid repeating it but to implement socialism more effectively. Coming soon to a theater near you, *What about the Blob? What about B.o.B?* Hollywood would have one believe Bob was Bob Wiley (What about Bob) or Baby on Board (Top Gun Maverick), but the Blob is pervasive. The

grammar and spell checker of Microsoft Word even asked the author if he wanted to ignore that line.

“Just to make things more confusing the system of weights and measures can be changed from Metric or SI back to the Imperial system or vice versa. Even the national anthem can be changed for no other legitimate reason than to add to the confusion. The more confusing learning is, the less can be learned and fewer people can “unfairly” get ahead. That is the system of equal outcomes which accompanies most democrazies.

“This is from the 0057 Chevy, formerly the Bible, which is something old that is capable of moving a person emotionally and spiritually. ‘There is another evil I have seen under the sun. Kings and rulers make a grave mistake when they give great authority to foolish people and low positions to people of proven worth.’ Ecclesiastes 10:5-6<sup>43</sup>. Rulers is an acronym meaning requisite unnecessary legislating executive regulating salesmen.

“Dorothy could be heard to say, ‘Toto, I have a feeling we are not in Kansas anymore<sup>44</sup>. We are in the land of equal outcomes not equal opportunity.’ Nobody can get ahead but everybody can get behind. To get ahead people can leave or can they? Class dismissed.”

### 3. The Final Frontier

In the past, people left the Old World because of primogeniture, religious persecution, starvation and poverty. In England, the oldest son inherited all of the family's wealth, and the neglected children could strike out on their own in the New World. Many people left the Old World for the prospect of freedom. Wars were fought to totally escape the clutches of tyranny such as taxation without representation and quartering occupying soldiers. Is a clean slate possible for anyone? Is a conservative enclave the last hope<sup>45</sup>?

What happens when there is no more New World to escape to when the status quo becomes intolerable? Can earthlings live in outer space? What about the asteroid which occupies the same orbit as Earth called Bennu? It has a diameter of approximately half a kilometer<sup>46</sup>, so it cannot hold many people. What about the Moon or Mars? Can colonies be established in those places free from tyranny and propaganda? Can earthlings ever connect with life elsewhere in the universe? Is that the final frontier?

Would aliens get bored very quickly of earthlings not mentally agile enough to reject propaganda like the vaccine is safe and effective or masks work or any number of pointless and stupid wars were unprovoked or were to save democracy? Not to mention that carbon is plant food, there is no climate emergency, and Mother Nature does her own thing while laughing at humans claiming to control her.

In fact, plant growth in greenhouses is accelerated with levels of CO<sub>2</sub> above 1,000 ppm, and if the CO<sub>2</sub> level ever drops as low as 150 ppm, life ends, and planet Earth becomes lifeless. Therefore, carbon sequestration (capture) done in the name of the environment is really a weapon of mass destruction, or at the very least, money and wealth destruction. After all the hoaxes claiming weapons of mass destruction, it would be ironic that when the real thing (not Coca Cola) came along, it would be ignored.

<sup>45</sup> Watson, Warren, *Free Alberta Libre*, Amazon Kindle Publication, 2025, Retrieved September 2, 2025 from <https://watsongallery.ca/MyBackPages/FreeAlbertaLibre/FreeAlbertaLibre.htm>

<sup>46</sup> Bennu, NASA, Retrieved January 16, 2024 from <https://science.nasa.gov/solar-system/asteroids/101955-bennu/>

Freedom-loving politicians, like Donald John Trump, were unparalleled, but the propaganda was so intense against him that his mother, Mary Anne Trump (née MacLeod, Isle of Lewis, Scotland<sup>47</sup>), had she been alive, would have not liked her own son. The paltering, the twisted truths, intentional omission and lies based in fact were very effective. It became impossible to even discuss Trump with a person who believed the propaganda against him.

Two people will not come to the same conclusion if they have different facts. It is like adding 33 and 22 and using different bases. If one person uses base 5, he gets  $33 + 22 = 110$  while if another person uses base 10, he gets  $33 + 22 = 55$ . With proper subscripts, it can be written  $33_5 + 22_5 = 110_5 = 30_{10}$ .

The mean girls' club was just that effective. Agitprop is "refined over many decades using every field in the disciplines of social sciences such as psychology and psychiatry. It is a science, and it is very powerful<sup>48</sup>."

Elon Musk's own mother, Maye Musk (née Haldeman, Regina, Saskatchewan<sup>49</sup>), hated Trump until the propaganda was directed at her own son. That made her realize if the propaganda against her son was false which she knew for a fact, all of it was probably false.

People should have reached that conclusion about carbon. Since the propaganda against carbon dioxide (which is plant food essential for life and is not a poison) is false, all of it is false. Trusting liars is a fool's errand. A sensible person should tell himself, "I know they are lying about carbon, therefore I cannot trust what they say about anything especially a person who belongs to the party I have been told I do not like."

---

It is even worse than that. Not only has Trump stated he does not like socialism and one world order, he used to be a Democrat, and becoming a Republican was the ultimate betrayal. Trump is more brilliant than people will ever give him credit for being. He found that the Democrat Party left him, so he joined the Republican Party and remolded it in his vision of America First. It became the Make America Great Again Party concerned with the working class and the trades. Will historians refer to 2016 as the Trump political realignment? The Republican Party became pro-worker and more populist while the Democrat Party still expected the vote of the worker, but had become the party of the radical left and big money interests. Who knows what history will say with all the fake news swirling around agitated propellers? Trump also attacked the corrupt elite who broke the rules for personal profit or advancement. To some, the climate change hoax was a religion, and Trump's irreverence to their newly found faith was intolerable."

Even conservative politicians like Pierre Poilievre<sup>50</sup> (Federal Conservative leader since September 10, 2022<sup>51</sup>) and Danielle Smith<sup>52</sup> (Alberta's 19<sup>th</sup> Premier starting October 11, 2022<sup>53</sup>) were taken in by the propaganda that carbon capture or sequestration was good and was not a weapon of mass destruction. Despite this incorrect belief, they were partially on the right track because they wanted to "Axe the Tax," but a better slogan would have been "Net zero is an IQ." They also spoke the language of the propagandists conceding that reducing carbon emissions was important and not a democratic plumbing hoax. Are greenhouse operators smarter than conservative politicians or is propaganda (agitprop) just that effective?

<sup>53</sup> The Premiership of Danielle Smith, Wikipedia, Retrieved April 11, 2025 from [https://en.wikipedia.org/wiki/Premiership\\_of\\_Danielle\\_Smith](https://en.wikipedia.org/wiki/Premiership_of_Danielle_Smith)

It is all a hoax. The hoax changed names from global cooling (and the glaciers are coming) to global warming (and the ice caps are melting and coastlines will be flooded) to climate change (because warming stopped, and the flooding never occurred) and then to climate emergency because not enough children and the simple minded were scared enough. The name change alone proves it a hoax plus none of the predictions ever come true. Al Gore's movie, *The Inconvenient Truth*<sup>54</sup>, is inconveniently (to the hoaxers) full of them. The dumbenment will likely take credit by claiming that the trillions the Western dumbenments spent must have worked, but nobody really knows and nobody can prove it. Yet one thing that is certain in addition to the fact that goovernments waste money is that the climate changes whether man likes it or not and has been doing so since the Earth started rotating around the Sun. Mankind may be a factor but certainly not as large as the Sun, the clouds and the sinusoidal nature of warming and cooling on Earth (daily and seasonal).

None of the natural disasters if correlated with population and GDP have gotten worse. Wildfires are not due to carbon. They are due to humans, sparks from faulty power lines, lightning strikes and forest mismanagement (no controlled burns). If the forest companies were allowed to look after the forests themselves that would be better than the government.

The simplest way to prove it is all a hoax is to look at carbon. Carbon is CO<sub>2</sub> and is needed for photosynthesis. It is plant food, critically essential for life. If it drops from around 421 ppm to 150 ppm, life will end on this planet. That is probably the only way there ever will be peace from the climate ideologues. It is an anti-human death cult that will produce desperate people ready to embrace democratic plumbing. Mark Twain said it is easier to fool someone than to prove they have been fooled.

The real truth is that the propaganda machines, like big corrupt goobernmental bureaucracies, cannot do anything right or cheaply, and world order socialism will be the end of comfortable living for the lower classes for thousands of years. There

will be no ult-wipe anywhere. All terrestrial intelligence will be suppressed. That makes intelligence alien or extraterrestrial.

The class on SETI was one of Sam's favourite topics. The search for extraterrestrial intelligence was very exciting.

The komissar organised his notes and asked, "Are we aliens?"

The students chimed in unison. "Oh, no sir."

"And why not? David?"

David sat up even straighter and had been listening even before hearing his name. He said, "The BO would not allow it."

A dictator in a centrally planned country was all powerful, however, the CU was free market driven not centrally planned, and the BO was more laissez faire than creative kids could imagine. His job was essentially keeping government small and addressing grievances which he called whine and decrees (wad).

Karen said with emotion and without waiting her turn, "There is no such thing as an illegal person."

The komissar broke out into a broad smile and said, "Of course, there is not, Karen, but people do illegal things and must face the consequences. However, I am not talking about illegal aliens."

He continued, "Nevertheless, a country is defined first, by its borders, and second, by the kindness of its government to its own citizens. Does the country come first or the ruling class or a foreigner? The CU is a country because its borders are respected, and the Benevolent One has our interests at heart. Not a single immigrant should be allowed if one runner of the CU is neglected. What kind of destructive moron thinks democratic plumbing, AKiA (also known as) socialism, can be

implemented in the first place, but also think it can be done with open borders?” The kids stifled a laugh at the komissar’s passion. He continued.

“A leader cannot neglect social programs by flooding the country with welfare recipients or by destabilizing the country with debt. As the great observer, Alex Jones, pointed out, social control is easier after a collapse<sup>55</sup>. It would be nice to end poverty in the world, but not at the expense of ignoring poverty in one’s own country. Ignoring the debt and collapsing the system to build back bitter are just foolhardy. It is common sense that a person must clean his room first<sup>56</sup> before trying to clean the world. Once the room is clean, then the house, the yard, the neighbourhood, the city, the region, the province, and then the country can be tackled. Most people do not get much past their own yard in their lifetime.”

“Why is that not a given with countries of the world? So, a person may not be illegal in the strict sense, but they really do not belong in a country if they do not respect the laws, including those regarding immigration. They, along with any politician, must be mainstreamed, expelled and sent to Maine. Immigrants must be taxpayers not welfare recipients. That is the law in the CU. It is illegal to deprive locals of social programs, a principle started by Tommy Douglas of Canada. The CU imports people, not problems and definitely not those sympathetic to democratic plumbing, the most irreconcilable problem in the world.”

Komissars find students, even those in a dictatorship, often try to sidetrack the lesson. They go right after the controversial topics. Not many lessons get sidetracked by saying chocolate is good. Back on track, the komissar said, “I mean a full-blown UFO! Could we be Martians?”

Not at all lazy and not sitting in a corner, Suzy’s arm shot straight up, and the komissar nodded at her. She took the question literally and said, “No sir, we are not

<sup>56</sup> Peterson, Jordan B, *12 Rules for Life: An Antidote to Chaos*, Toronto, Canada: Penguin, Random House Canada, 2018, Rule 6, pages 146-159.

from Mars. Besides, Martians can be no more than just bacteria.” She paused, smiled, and added, “Legal bacteria.”

A few kids could not stifle a chuckle. The komissar glared and ended the suspense. “If there are living beings elsewhere in the universe as supported by the Drake equation, we are aliens to them.”

Sam wondered if many people wanted to immigrate to the CU because it was the place to live. Only criminals left, and nobody broke the law to enter. He pushed the thoughts out of his mind as he realized he had not been paying attention to the class, if only momentarily.

The komissar wrote the following equation on the board.

$$4 \times 0.5 \times 0.40 \times 0.25 \times 0.10 \times 0.10 \times 3,000,000 = 6,000$$

He pointed to each number as he spoke. “The Drake equation assumes that in our galaxy, four stars are created per year with half of them forming planets. Looking at the solar system which includes Pluto and Charon as planets, a solar system has four out of ten planets like Earth with one quarter of them with life. In the universe, if one tenth of those with life could have intelligent life and a tenth of those could be capable of interstellar communication, and a civilization remains detectable for 10 years to six million years (an average of three million years), there could be 6,000 civilisations from which attempted communications can be detected<sup>57</sup>.

“This seems like a huge number because the Fermi paradox created in 1950 asks why there has been no contact. Why is there a great silence<sup>58</sup>? People in Roswell, New Mexico would disagree, but UFOs seen so close to a military testing range of White Sands may be created by humans committed to secrecy.

<sup>57</sup> Harris, William, What are the odds there is life in outer space? How Stuff Works, Updated: Jun 9, 2023, Retrieved December 30, 2023 from <https://science.howstuffworks.com/space/aliens-ufos/extraterrestrial-life-odds.htm>

<sup>58</sup> Stem Geeks, Professor Brian Cox, Retrieved December 31, 2024 from <https://www.facebook.com/reel/1222878215423831>

“However, has there really been no contact? In 1977, the Wow! Signal was detected by the Big Ear Radio Observatory in Ohio. It was a strong narrowband radio signal that lasted for 72 seconds. It, however, was not modulated (neither amplitude nor frequency modulation), so it carried no additional information than the pulse itself<sup>59</sup> that current knowhow on Earth could detect. What about a more advanced form of modulation? Who is to say, the pulse is not packed with so much information to make mind travelling possible?

“The Wow! Signal was eventually attributed to a comet passing by<sup>60</sup>, but did the scientists rule out all the electronic devices at their disposal? This sounds like an episode of the *Big Bang Theory* television sitcom during which the main character’s experiment in the Arctic was altered by an electric can opener<sup>61</sup>.”

“Did the aliens come to our planet but hide on the dark side of the Moon? That sounds like a rock song (Pink Floyd’s 1973 concept album). All parts of the Moon receive sunlight over the course of a lunar day, but because of tidal locking<sup>62</sup>, the far side of the moon always remains hidden from the Earth’s surface. People on Earth see the same craters which make up the face called the man on the moon. Therefore, the far side is a good hiding spot for aliens to determine whether contact should be initiated. Since humans are often seen picking up the poop of cats and dogs, aliens may have already attempted to contact the four-legged animals not realizing the two-legged humans were the superior beings. Believe me class. Humans suckered in by socialism are not worth meeting and should not even have the right to vote.

“There are two important questions to be raised. Can aliens travel to our world? And from where are they travelling? They must have energy to live and survive, so they must be in orbit about a sun. The closest solar system with a yellow sun like ours is

Alpha Centauri. It is 4.35 light years away<sup>63</sup>. Today's assignment is to calculate how long it would take a Saturn LIV rocket<sup>64</sup> to get there. It is due in a week.

"Humans are a carbon-based lifeform. Also give some thought to which elements could be an alternative to carbon. Can life exist in orbit about a red sun? The last two questions are bonus questions. Class dismissed."

Sam O'Shea never talked that much in class unless he was asked a direct question. He did not need to prove anything to his classmates, just to the komissars on exams. He did not like the sound of his own voice as much as some of the other students did. This was not because he sung in the key of off but because he did not need to talk to prove he belonged to the academic stream. The onus was on the academic stream to keep him. Much enjoyment could be achieved from romanticizing about the frontiers of thought. He loved learning about the unknown and always did the bonus questions. He wanted to learn as much as possible to guide what profession he would choose. However, he had an inkling that he could be happier in the trades or vocational stream.

The students of Sam's class were either like Sam and genuinely interested in learning or they were scared into it by their parents and the political environment of the CU. Fear was a strong motivator especially of the youth who could appear, at times, difficult to control. Parents should control kids, and not vice versa. Countries fall apart when the people in charge think they know everything, when, in fact, they really know almost nothing.

The first step to higher intelligence is realizing how much an individual really does not know. If a person cannot admit he does not know something, he is not open to learning. Even if a person is open to knowledge, how smart can a person be if he is taught a bunch of fallacies?

Keeping the masses uninformed and removed from the truth means they can be happy under big goovernment control and neglected social programs. Big goovernment helps itself not the poor. Helping the poor is the original lie from which stems much propaganda.

## 4. The Place to Live

How does a citizen know his country has a living environment better than elsewhere on Earth? Is he told in school or by the media? Does he take the word of the leader who says there is no better place to live than his own country? It is actually tragic when a leader does not believe that or even worse when he hates his people and does not want them to live in the best place on Earth. The better the place is to live, the more stable the government should be.

The best way, to discover one resides in the place to live, is to travel and live outside one's own country. Sam's parents did exactly that. They met outside the CU in Indonesia or the Isles of Spice formerly known as the Dutch East Indies. They could have raised their family there but decided to return to the CU. It is the salmon instinct that is strong in some humans. Is it hereditary? In salmon, it certainly is.

Sam is short for Bersama<sup>65</sup>, which is an Indonesian word meaning together. As the first child of Sam Senior and Madeleine O'Shea, he brought them together. Madeleine née Rigg (sounds like "nay" not "knee") was from the CU and was named for nearby islands in the Caspian Sea. Sam Senior was from Cork, Ireland which was where the wine cork was first invented. Was this a paw crick full (apocryphal)? Some people may dispute these facts, likely out of jealousy. The Romans claim the wine cork<sup>66</sup>, and the Gulf of St. Lawrence claims the Îles-de-la-Madeleine.

Sam Senior was the only child of Paddy and Ana O'Shea. Ana was Bosnian<sup>67</sup>, and in her first language, sam means alone. Why Indonesia? Sam, a farmer, was travelling to pick up farming techniques, and Madeleine, a robotics scientist, was working on the automation of the rice paddies. She had invented the equivalent of the cotton gin or the cotton engine made for rice. The cotton gin separates the cotton

fibre from the seeds and revolutionized the cotton industry. She called it the rice gin which was much different than rice wine, a drink called sake<sup>68</sup> (saw key). One might think rice gin is a drink mixed with juniper berries, but it is not.

For her discovery, she was as famous as Norman Borlaug. He was the father of the green revolution, the real one, not the one with the Green New Steal<sup>69</sup>. The latter was rammed down people's throats, undemocratically in a centrally planned manner. Steal and Socialism are the same thing, because Socialism is theft, and the thief makes sure he and his family are incredibly rich first of all. Therefore, under Socialism, the poor are fooled and are worse off than under free market capitalism with no regulations.

Central planning is bad no matter how smart and devoted the central planners are. They cannot compete with the invisible hand of free market capitalism which automatically adjusts prices so supply can meet demand. When the government starts picking winners and losers not based on the free market, for example, by subsidizing green energy, the system falls apart. However, corruption with kickbacks and insider trading as well as wasteful government spending make the situation even worse.

Adam Smith, the father of free market capitalism, spoke of the invisible hand that came with requirements which were critically ignored or replaced by ellipses in too many texts. People must invest wisely which includes preferring domestic over offshore. Furthermore, the greatest output with the most jobs must be the goal. Then the invisible or magic hand produces a successful economy<sup>70</sup>.

Shaoxing is Chinese rice wine; mirin is sweet Japanese rice wine; and sake is dry Japanese rice wine.

<sup>69</sup> The Green New Deal was a foolish plan to wean a country off of fossil fuels into widespread poverty. It is best described as a watermelon, green on the outside and communist red on the inside.

<sup>70</sup> Oren Cass (Author of *The New Conservatives, Restoring America's Commitment to Family, Community, and Industry*): How Trump's Tariffs Are Reversing the Foreign Policy That Doomed America's Economy, The Tucker Carlson Show, Premiered May 16, 2025, 88 minutes, Retrieved May 16, 2025 from <https://tucker Carlson.com/tucker-show-oren-cass> [00:12:42]

Vesputia had hindered or enslaved market capitalism because of many regulations, high taxes and unreasonable energy costs. Restaurants asked for tips often starting at 18%. Tips were originally for good service, not to alleviate the problems of big goovernment. The best tip is actually not 18%, but “Stop believing and supporting a dumbernment which makes the cost of energy and the cost of running the goovernment (or anything) high.”

Borlaug invented a sturdy strain of wheat to significantly reduce world hunger. He won the Nobel Political Peace Prize of 1970<sup>71</sup>. Madeleine O’Shea would have won the Nobel Political Peace Prize if the organization liked her politics. Conservative women are often maligned and subjected to intense lie-filled propaganda. Sarah Palin was driven out of politics because of it. Not many can fight back like Trump, and that really angers the propaganda fools. That makes them faT, fanatically anti Trump.

Sam Senior and Madeleine spent several harvests in Bandung of the Spice Isles of Indonesia while their kids were small. A harvest is 365 days, and the Harvest is one of the four seasons in the CU. The leaves may fall, but it is a crucial time for everyone because farming cannot be taken for granted. In Indonesia, the leaves fall all year long with no fall colours, and there are only two seasons, the rainy season and the dry season.

The ruler of Indonesia kept his people poor by controlling the education system. If the masses are kept ignorant and are fed a regular diet of propaganda, they can easily be made happy living under a dictator. The internet must also be controlled.

Sam and Madeleine recognized the importance of education, so they made reading fun. Every night, after their teeth were brushed, the kids would gather in one bed for bedtime reading. At first the kids wanted anything that delayed lights out, but it did not take long for the love of literature to be passed from the parents to their kids.

---

<sup>71</sup> The Nobel Peace Prize, 1970, Norman Borlaug Facts, Retrieved December 30, 2023 from <https://www.nobelprize.org/prizes/peace/1970/borlaug/facts/>

Outside of bedtime reading, each kid could be seen curled up with a book with a nearby dictionary. Sam Junior read all the Western novels he could find. He loved Zane Grey and Louis L'Amour. He also read the Hardy boys and the great brain. The girls read the Nancy Drew series, *Alice in Wonderland*, *Anne of Green Gables*, *Jane Eyre* and any book by Jane Austen.

One day, Sam asked his father why he got different books than his sisters did. His father explained that boys and girls are different. He then realized that the girls got classic literature, and Sam Junior got Westerns. It really did not matter. Expanding one's vocabulary and reading skills were important offshoots of the real reason to read, to have fun and enjoyment. Books are an escape.

"Son, why don't you read their books as well and see if you like them? If you want classic literature, here is the *Sun Also Rises*. It is about fishing in Spain. *The Old Man of the Sea* and *Moby Dick* can be next. Sam read them all. He still had his chores, and the family played cards, but time was always found to read.

What about a modern television? The O'Shea's did not own one. It was considered by Sam and Madeleine to be the idiot box, full of ads and propaganda. Television in Indonesia was not that much different from television in North America. It was just ten years out of date because Indonesia got the old reruns.

Madeleine correctly thought television and Hollywood promoted the sexualisation of children. She would never allow her daughters to wear makeup and be as promiscuous as portrayed on the small and big screens. Television was a poor baby sitter because it was violent and full of the wrong values.

Sam Senior remembered a poster put out by the government of Canada that had a picture of three long haired stoners with sagging jeans in desperate need of a belt, both for securing their pants and for meting out discipline. The caption was, "You can talk to your kids about alcohol and drugs or they will." Television was no different than those three stoners. Furthermore, television was easily controlled if the broadcasting companies became dependent on government funding which included the purchase of advertising, also known as public disservice announcements.

Sam and Madeleine missed home, not only because of the fall colours, but because it was so sad there were so many poor people with no middle class. Indonesia was not a land of opportunity. Quality education was clearly absent except among the children of the wealthy who sent their kids overseas to learn. Living there made one appreciate the CU where education was not held back from the unwashed masses.

On the subject of washing, not being able to drink the water was also a problem because that meant that ice cubes and lettuce rinsed in tap water gave a person Bandung belly or diarrhea. This problem was really nothing compared to the lack of opportunities. After settling back in the CU, the family lived on a farm in Collettivo, a farming and fishing collective.

Sam Junior had three younger sisters, Dewi, Indah and Jen A. Marre. Dewi and Indah were born in Bandung, and Jen A. Marre came along after the move to Collettivo. Sam Senior and Madeleine were not quite fed up with having kids, just naming them. They loved so many kids because that meant help on the farm, security in their retirement, and enough players for a bridge game.

Dewi is Indonesian for goddess, and Indah means beautiful, just like Linda in Spanish. To someone who spoke French or English, they were nice Indonesian names. Are the names presumptuous? No, of course not, all parents see their children as special gifts from God.

Sam loved his sisters. They were not cookie counters, complainers, whiners or spies reporting everything about him back to the parents. They were not those things. Sam knew that from his lip reading. They were cool. They were friends and teammates in the game of life. They actually could be genuinely happy without jealousy for the successes of a sibling. They even idolized Sam.

It was fortunate Indah was not called Benjamina, meaning the youngest because she became the second youngest when Jamos came along. Jen A. Marre O'Shea was the only one of the siblings with such a long name, so she got called by her acronym. Jamos got that and all the hand-me-downs.

It was just a coincidence that Jamos' name looked like "J'en ai marre" which was sometimes said under the breath of an adult in the place of a curse. The language was too rich to simply use a curse word. Pirates and assorted criminals, street corner ladies, simpletons and everybody in the MT Territories curse. Cursing is necessary and a basic human right, but it still can be creative. The CU did not want to be left out, so it created CUs words.

A fifth child never came along, but would this child be called Quentina or Quentin? Naming was fun but not important. What really mattered was that they were a family because they were bersama. Being together was nicer than being alone.

Sam Senior (father) managed the farm, and Madeleine (mother) helped automate factories in the CU. Sam Junior was the fisherman, and all four kids helped Father in the kitchen and on the farm. The mother and father of the family worked hard but were not their children's servants. The children worked hard too. They did their own laundry, kept their rooms clean and learned how to be a bottle washer and sous-chef. They also played, but with children, that is a given.

Sam's room was the messiest, only because he was the busiest and the hardest working. The mess looked random but Sam knew the sorting system. The little Jamos did her best, but like carbon dioxide with respect to temperature, she lagged.

Father also hired workers from the village. These farmers came recommended and produced value. They usually liked their jobs. They wanted to be outside and were fond of the exercise. Having a shower after a day of work was just as satisfying to some as taking off a tie was to others. If they were not paid a fair wage, and they worked hard, they could easily go elsewhere for work. There was always mutual consent, and good workers were valued. The CU had the motto that if people are going to do the work, they might just as well do it to the best of their ability with a smile. A living wage was the responsibility of the worker not the employer and certainly not the government. Living expenses were miniscule because the bureaucratic overhead was very limited, and energy was cheap and readily available.

Collettivo was an hour's drive from the Hud where the Benevolent One lived. This was a place of high urban density, and in direct contrast, Sam's village was a lud.

That made him and his family ludites. This could be confusing because they were not Luddites, but they were not slaves to technology either. Regardless, they were fones or fortunate ones. Fones should not be confused with the people of the MT Territories who could not be separated from a tracking device called a cell phone. They were not so fortunate. Fones did not have phones and did not live incel.

Other collectives had mining, some had forest products, and some had manufacturing which necessitated the sharing through the free market. Energy was cheap and plentiful because it was nuclear. The CU even exported excess energy which recouped the operating costs and some of the initial capital costs. Everybody had work and food. The Benevolent One made sure of that by promoting the CU. It was the CU first. The Benevolent One loved his people and his country more than money itself.

Because of the BO, the common greeting changed from, “Have you eaten<sup>72</sup>? (吃了吗<sup>73</sup>)” to “Where are you going?” The implication of this new greeting was that starvation had been eliminated, and nobody in their right mind would leave the place to live.

A common greeting by a Baizuo was anything derogatory about Trump. “Did you hear Trump put ketchup (as if steak sauce is not just a form of ketchup) on his steak?” That greeting immediately tells each other they are compassionate socialism-friendly people who listen to fake news. They are kindred spirits. There is no awkward discovery period with these people.

If a person tells them that Trump is the best president ever for energy, law and order, world peace, trade tariffs (good for America not Canada but duh! he is an American president), and the economy but ignores the debt and wants the goobernment to do too much by investing in key industries (chips, drugs and steel), they will have a mental block with that person. When they have any future interaction, a mental

hyperlink will appear in their blank eyes saying “Avertissement, this is a Trump lover.”

Ting sui is also a good greeting for the Baizuo. Trump is no good, socialist utopia’s inevitable. Ting sui is also simplified Chinese for listen and follow<sup>74</sup>. That sounds like the motto for the left who want everybody, especially conservatives who think as individuals, to listen and follow (obey) their groupthink.

Other countries would be lined up to take advantage if the Benevolent One was a sucker, but he was a shrewd leader and attracted foreign companies. He recognized the importance of the supply chain, domestic manufacturing and offshore independence<sup>75</sup>. The education system of the CU was so advanced that domestic workers were coveted. There was no Nobel Political Peace prize waiting for the Benevolent One. The Nobel committee hates leaders who put their own country first and do not want one world order. Foreign countries also hated the Benevolent One because they could no longer take advantage, and they lost companies to the CU. They also accused him of improperly dispensing toilet paper over the top of the roll.

The BO acted as if humans were more important than the environment because that opposable thumb could count for something (tool use and hunting ability). However, the opposable thumb was nice but not as important as a soul and an intellect which could be stifled by poverty. The ability to communicate could be hindered by censorship and propaganda. A prosperous economy with cheap energy lifted more people out of poverty which was good for all, including the environment.

Even if the goobernment hired the smartest workers and kept them motivated, a centrally planned energy policy would be a disaster. The invisible hand is the best way to make energy policy decisions. The goobernment must step aside and let the free market make the decisions with no regulations.

<sup>75</sup> George Friedman Predicts the Next 50 Years of Global Affairs and the Importance of Space Domination, The Tucker Carlson Show, Premiered April 24, 2025, 80 minutes, Retrieved April 24, 2025 from <https://tucker Carlson.com/tucker-show-george-friedman>

No Regulations! Every time those two words are said together, a bureaucrat somewhere chokes. In the film *It's a Wonderful Life*, every time a bell rung, an angel got wings. However, bureaucrats, with their self-interests, are no angels. Sure, regulators claim to do something good like helping the environment, but their true purposes are to stifle personal advancement, promote socialism and enlarge goovernment, i.e. (Latin for “id est.” meaning “that is<sup>76</sup>”) to help themselves.

People, of all political stripes living in the MT Territories, were held hostage by the environment. They were so concerned for the environment yet they would not pick up garbage in their front yards.

“Do what I say to protect the environment,” was another common battle cry. There was no evidence that anything the goovernment did to save the environment actually did help. There was more evidence that the environment did not need saving. What a scam! The environment always fixes itself, and the bureaucracy takes the credit.

The politicians did not care because every measure increased the size of goovernment. The Pavlovian response in politicians was very strong. When something that came along to bring in more taxes, the politicians salivated and drooled. Making the bureaucracy bigger, stronger and centrally planned was the goal. This was all part of the affliction called environmental illness.

In the CU, the runners lived in equilibrium and were proud to keep their environment pristine. They took from the land, but efforts were made to replenish the resources. That applied to animals as well. They were in a cow equilibrium. Every time a calf was born, a cow could be slaughtered for meat. The exact formula was determined by the farmers and the free market.

The fones lived in a fish equilibrium as well. Fish farms replenished stocks of salmon, halibut, haddock, cod, albacore tuna, and pollock. Freshwater fish farms had trout, catfish, Kokanee Salmon, perch and others but not tilapia (St. Peter's fish)

<sup>76</sup> The Difference Between 'i.e.' and 'e.g.' For example, the different ways to use them in a sentence, Merriam-Webster Dictionary, Last Updated: May 16, 2025, Retrieved August 31, 2025 from <https://www.merriam-webster.com/grammar/ie-vs-eg-abbreviation-meaning-usage-difference>

because that fish cannot survive cold water<sup>77</sup>. The one thing about schools of fish is that there were no drugs, but they still could get hooked.

There were no vegetarians as they would be like fish out of water. A seafood diet was more discriminating than a see-food diet, but both were avoided by vegetarians. A person of the MT Territories would try being a vegetarian just to be a better citizen, and a person could not know a vegetarian for five minutes without being told of their virtue. However, that did not occur in the CU because surf and turf were delicious. Not only that, vegetarians would never admit it, but it is very difficult to replace all of the nutrients found in meat with vegetables, and nobody in their right mind licked their lips over cauliflower sizzling on the barbecue. A person could actually feel the salivation stop.

This taste came from a fraternity at Uboca or university of the mouth(y) called omega-phi. Omega-3 fatty acids were good for the brain and went a long way to reduce mental illness<sup>78</sup>. Fish were good examples of that. Sam wondered if fish were the sanest of the animal kingdom. They were in schools but did not go to Uboca (an acronym for university). If a person could acquire a good work ethic, in-demand skills and happiness without university, the system was better for it, especially if Uboca meant student debt as it often did.

Vegetarian control would be the end of Collettivo. That would also be the end of endorphins from meat<sup>79</sup> which were a source of happiness. That should not be confused with endolphins which may be why the bottlenose dolphin has a constant smile<sup>80</sup>.

The internet search engines of the past made it difficult to find something positive about meat. This was obvious vegetarian control. The word vegetarian had in its roots, a native word which simply meant “bad hunter.” Those interested in vegetarian control wanted to ultimately control people. It started with the diet and would not stop until words and people were no longer free. If words can be controlled, the wrong thoughts cannot be expressed, and people can be more easily subjugated. Was this a secret desire to free the cow and transfer its captivity to people? How can somebody proposing bugs over a delicious steak not be declared mentally insane and given help?

Vegetarians were kind to animals, but would cows be raised if they were not good for anything? Cows are not even good for practising to fight bulls, and they can never catch on as good pets. A person need not try to watch a television show with a cow on their lap to know that fact. However, fewer people would get hurt in Pamplona if they were running from the cows. Hooves still hurt but not like the horns of bulls.

Would the cow roam the open plains like the buffalo of the past? Would they try coming back to the barns where life was safe and easy?

The cows could be hunted for sport. Poor hunters could even bag something. Perhaps the animal predators would welcome a frequent steak meal. However, it would be steak tartare. The majestic cow could be the national animal like the eagle or the beaver of the utopian societies of the past. It would be studied in the class system.

Meat from the MT Territories used to be of the best quality. Texan and Albertan beef were the best in the world next to Argentinian beef, but after the revolution, meat could no longer be trusted. That’s exactly what the vegetarians wanted. Jealousy was a huge motivator. The CU became self-sufficient, but before that time, imported meat had to be frozen at -4 degrees Fahrenheit for seven days or cooked until the entire meat was at 145 degrees Fahrenheit for three minutes. Ground meat needed an interior temperature of 160 degrees Fahrenheit<sup>81</sup>. Meat raised in the CU did not need these precautions because there was no risk of tapeworm infections. All meat

---

<sup>81</sup> Tapeworm Infection, The Mayo Clinic, Retrieved December 30, 2023 from <https://www.mayoclinic.org/diseases-conditions/tapeworm/symptoms-causes/syc-20378174>

in the CU was kosher. Being a vegetarian is fine, and he is a better person just as long as he does not take meat away from others.

Sam and his sisters walked to the class system every day. They strolled up the country lane into town. When they met fellow runners, they greeted them either with “Praise the leader,” “Praise always be yours to tender” or simply “Where are you going?” Where are you going was less formal but was used by runners who worked hard. It was a bonus wayg.

They ambulated past houses that looked like imperfect boxes with gables and shutters. All the houses looked remarkably similar as they appeared to lean into the incessant pushes-unseen or simply P-U. After all, bad wind caused a person to say, “Pee-yew.”

Each box was covered by a sloping roof. Nothing could ever stay on a flat roof, praise to the leader and praise also to the pushes-unseen, but a sloping roof was necessary because it did not accentuate that all the slants of the houses were not true. Slants were the only things not true in the CU.

The profit-run media with high journalistic integrity made sure of that. Integrity could be said in the same breath as journalism again. Clearly, for that reason alone, the CU could appear to be a fictitious place. Calling journalism in the MT Territories lamestream media or fake news would make the heads of some people (the democratic plumbers) explode with anger. People who like being fed lies are those who really hate being told they are not respected enough to handle the truth. People can be controlled easily if fed fake news and of course bugs.

The houses were picturesque. Each were painted in a different colour from the neighbouring houses. The paint had faded, and the houses were left with a pastel quality by the P-U and the precipitation that, at times, looked almost horizontal. Just like St. John’s, Newfoundland, a possessive place unlike Saint Jean, New Brunswick, these houses were called Jelly Bean Row<sup>82</sup>.

---

<sup>82</sup> Jelly Bean Palette, Newfoundland & Labrador, Canada, Retrieved November 3, 2024 from <https://www.newfoundlandlabrador.com/trip-ideas/travel-stories/the-jelly-bean-palette>

Each house had a vestibule or an enclosed porch (porcha) that covered the front door. Nobody in the MT Territories could brag that every house in their country had a porcha in the yard. They could not even brag that there was no garbage in their yard.

The porchas were also picturesque, some only the size of a closet with two windows, two doors and the obligatory potted plants. Sam's mother had irises, of which, some were bearded. She liked the paintings of irises from the past by Claude Monet. The neighbours had sunflowers for a similar reason. They liked Vincent van Gogh. That was fortunate because they often shared the sunflower seeds. In the CU, people of differing artistic opinions could live side by side.

In the MT, misguided people who thought they had the correct political opinion persecuted those with differing ideas. Who really cares about politics? Only dumb people hungry for power are ever really in charge most of the time, and when a smart one actually comes along, the propaganda hides that fact by labelling him as stupid and evil. The government should be small and inconsequential compared to something that raises the human spirit like the arts.

The pushes-unseen were omnipresent, and they could be fierce in the Low-Sun (winter) which was the season when the sun was low in the sun-place (sky). The whipping P-U, if not impeded by a porcha would have probably pushed keys away from unsheltered fumbling hands. No one knew exactly what this ritual of the key was for, but no one ever questioned the Benevolent One. Doors did not need to be locked because the disincentives to crime were formidable in the CU, and the authorities could see you at all times.

However, the doors were still locked because without keys, the porchas would no longer have been needed. Keys were vestiges of the old times which served as reminders that times had become much better. The past, good or bad, was needed to get to the present and the future.

There was little crime in the CU because criminals saw the DoctER or were mainstreamed. Only occasionally, a runner fell off the Benevolent One's stairway

and lost benevolent points. The criminals who were mainstreamed inexplicably were supported by a foreign goovernment after expulsion.

There was no crime with guns because the Benevolent One reimagined them into water pistols. That kept subjects on the straight and arrow. Hunting was done with a slingshot or a bow and arrow. Hunters of the past were called sportsmen, but it was more sporting to hunt with a bow and arrow than with a high powered rifle. It would also be sporting if the prey were also armed, but that would become the most dangerous game<sup>83</sup>. The CU was certainly the place to live.

---

<sup>83</sup> Connell, Richard, *The Most Dangerous Game*, or *The Hounds of Zaroff*, Short story published in Collier's on January 19, 1924.

## **5. Freeeconomics**

## 5.1 Economics

If the reader wants to bluff his friends that he knows something about economics, he can make the following statement. “A viable business model relies on the market metrics.” The most important thing anybody should know about economics is that if it is done by a government, a person will inevitably say, “EEK! It’s eek-o-nomics.” An increasing out of control debt suggests that the goobernment does not have a basic understanding of simple finance not to mention the more complicated eek-o-nomics.

Economics is defined by Merriam-Webster as the social science dealing with the production, distribution and consumption of goods and services<sup>84</sup>. Freeeconomics is a system in which freedom from government overreach or any attempt to “help” meets economics.

There are four types of economic systems, the traditional, the command, the market and the mixed<sup>85</sup>. The traditional is a simple system associated with farming. The command system has the government in complete control, and the market system is the free market. A mixed system is a free market with some government control and some regulation. The word “some” somehow does not fit either with the words, government control, or the word, regulation. “Some” becomes “too much” too easily. A better word is, “No.” No government control and no regulations. There has been too many years of too much regulation. It is time for no regulations.

Which of the four systems is better? The market system is the clear winner. The proof is fairly simple once a person understands that the answer depends on which provides a better CEO, a company or a government.

---

## 5.2 The CEO

CEO stands for the chief executive officer of a company. The CFO is the chief financial officer and is a lesser position. People who would be a successful CEO of a company make a very small subset of the population who dispense toilet paper over the roll. They are typically hard working and highly intelligent with no time for a popularity contest.

When it comes to being a CEO of a goovernment, the best suited candidate usually is one who treats the position as a job not as a position of privilege. The unqualified leaders take full advantage of the perks of the job. The process of discovery gets a better CEO than a popularity contest called an election. Even a soccer goalie, the President of Argentina and economist, Javier Milei, knows enough to say, “Far from being the cause of our problems, free enterprise capitalism as an economic system is the only instrument we have to end hunger, poverty and extreme poverty across our planet. The empirical evidence is unquestionable<sup>86</sup>.” Free markets and private property are associated with freedom and prosperity, and socialism (democratic plumbing) is associated with repression and poverty.

The CEO of most companies work their way up the ladder learning the intricacies of the business and the best way to run the company. The CEO is not taken off the street, yet that is how a goovernment is run. The CEO of the goovernment whether he is a Prime Minister or a President is never as qualified as a CEO of a company which pays exorbitant taxes so that the politician can mishandle them. Freedom means lower taxes because an individual or a company can use money more efficiently than a goovernment.

The CU is more than just a benign dictatorship. It is an efficiently run organization. Its leader, the BO, used to be a CEO of an oil company. He earned his position with hard work, high intelligence and a bit of luck. He keeps dumberrnment small, keeps a zero debt (a zero deficit is a given as it should be) and allows equal opportunity by

---

<sup>86</sup> Milei, Javier, President of Argentina and former soccer goalie, His full speech to the World Economic Forum in Davos, Switzerland, January 18, 2024, National Post, Retrieved January 19, 2024 from <https://www.youtube.com/watch?v=4z44XP4u9Xs> [06:57 of 26:11]

keeping energy costs low. The goovernment is responsible for law and order including fair justice and national defense. That means not indicting political enemies and not being at the beck and call of a foreign country, no matter how pure and righteous it claims to be. Education, the media and healthcare are privately run small companies. Some of the taxes support these companies, but there is school and healthcare choice. The taxpayers decide which school or health care company get their mandatory donations.

Trump's presidency is unprecedented, and the cabinet of his second term will go down as the best ever and anywhere. However, they ignore the debt and want government involvement in industries like Intel and US Steel. That is scary because that grows government and loses sight of the fact that down the road, the president and the cabinet will be back to the normal level of incompetency and should control as little as possible. Central planning is always bad no matter how smart and competent the central planner (CEO) is and is even worse if he is corrupt or unqualified or worse still if he is woke.

## 5.3 Capitalism

Democracy is an important term, but countries can also be categorized by the term capitalism. This was a misused term by the arrogant people of the past who thought they had a better system than others. That distinction belonged to the CU. However, no one really understood the word. Capital was something of value present in every single society. It was commonly thought to be the currency such as pictures (called money by some) kept in a wallet, but capital could also be land, equipment, buildings, and natural resources.

There is always capital in every country. It cannot be avoided. The difference between countries is whether capital is controlled by the goovernment (central planning) or by the free market. In the CU, capital was controlled by the free market. The goovernment stayed out which was what it was truly good at, nothing.

A better description of the system is not democracy nor capitalism but whether spaghetti is cut or not. In the CU, a person is free to cut his own spaghetti. That makes for a better and smaller goovernment. Monitoring something as trivial as spaghetti, although delicious, means a large and growing bureaucracy. Politicians are happy to comply. If spaghetti is not cut, it can become a big tangled mess just like the goovernment.

## 5.4 Unions Divide

Are unions important in the history of the worker? Yes, unions are as important as symbiosis is to life and must be present unless they become so big and powerful that they kill their host. When symbiosis goes from mutualism to commensalism to parasitism, the association goes from beneficial to harmful<sup>87</sup>. The union becomes a parasitoid when it kills the host. When the company dies so does the union, but if the union can be eliminated before the company leaves to Polonia, the benefits remain, and the workers are happy.

Companies expect a day of work for a day's wage. That was often thought to be evil especially if the workers wanted more. In the CU, good workers earned the right to use the wayg greeting. Locals greet each other with "Where are you going!" That is not a question, but more of a statement that they are thankful having a job and living in the CU. There is nothing nicer than genuine patriotism in a friendly greeting.

In the CU, things (or people) that produce no value are illegal. They always claim to protect the workers but just add another level of bureaucracy. They allege mistreatment and assert that the other party can do nothing right. They are never happy, and no matter what, they want more.

What is family law, Alex Trebek?

No, but thanks for playing.

What is a professional athlete, Alex?

No, but close, nice try, guess again.

What is a union?

Yes, third try is a charm.

---

<sup>87</sup> Britannica, The Editors of Encyclopaedia. "Symbiosis". Encyclopaedia Britannica, 10 Nov. 2023, Retrieved December 30, 2023 from <https://www.britannica.com/science/symbiosis>

In the CU, unions are undesirable and illegal. Lawyers and politicians were limited because people producing no real value were eliminated. Ambulance chasing was outlawed.

Out of control raises make it more expensive for retired people on a fixed income to live. People should receive raises when they add more value, not just to make others ask for a raise out of envy. If everybody, not on a fixed income, receives a raise, the cost of living increases. The Benevolent One did not interfere. If a company did not pay a valued employee enough money, there was enough opportunity in the CU that they could get a better job not that faraway. Companies paid their employees well or they lost them. Unions were not necessary. They just added another superfluous layer of bureaucracy. Unions divide profits.

Was the CU a union bashing utopia? Compared to Vesputia, she was. Most of Vesputia had mandatory union membership while some parts had the right to work where union membership was optional. Perhaps, the CU took the right to work too far, but unions allowing companies to close doors due to bankruptcy was too far in the opposite direction.

In the CU, companies had to publish their wages and profits. Workers were given bonuses based on the profits. Companies loved the CU. The CU provided skilled workers and cheap energy with no corporate taxes. The CU loved companies and wealth creation.

In the MT Territories, unions became so strong that they grabbed most of the profits. How much profit should a company get? That should be decided by the free market not unions. It seems that if money is invested in wealth creation, the profit margin or interest earnings because of the risk alone should be more than if the money were invested in a safe mutual fund.

Gold spoke of a great wealth creation center of a lead-zinc smelter in the mountains of Vesputia. The town won two world champion hockey tournaments in 1938 and 1961. It was known for great hiking, skiing, and mountain biking. One off-day, a company engineer was walking with partner on a hill above the smelter. The partner exclaimed, "What an eyesore! Wouldn't it be nice if it were not there?"

The engineer was quite perplexed by the statement and replied, “I think it is beautiful. Without it, this area is a ghost town, and I have no salary here. It is much less than the goobernment would pay me to push paper, but I love my job. It is not a coffee-break job. That would be the same as a student staring at the clock on the wall all day because he is in the wrong stream. We would move where there is good work. It probably would not be five minutes from world class skiing with no lines and mountain biking with more animal than people encounters.”

The partner said, “Did I say eyesore? Sorry, I meant my eyes are sore. The smelter is beautiful.”

Because companies were not burdened with costs that kill competitiveness, the CU underwent a second industrial revolution. She attracted many foreign companies. The Benevolent One never understood why addition and subtraction were not grasped by rival countries who did not use qualified people for their decision making. Students of those countries must have been watching a clock when simple math had been taught.

Furthermore, the Benevolent One did not make his family rich from companies wanting cheap and good labour. Corruption would be bidding time on the way to true dough and disaster. The Benevolent One was not corrupt, and the fortunate ones were his true love not dough. Politicians of the outside world hated him for that and constantly sent ad hominem attacks his way. They even accused him of cutting his spaghetti.

Wages were based on the value added to the society which was determined by supply and demand. If somebody produced something nobody wanted, they got a small wage, a small number of pictures kept in a wallet.

A person’s success is an individual responsibility. Sometimes retraining is needed because a person does not like his job. Everybody still is expected to work hard at whatever job they have. It is important to increase skill and get promotions. Every job is important, and a job that provides a good day of work should be coveted.

A good worker may change his job often. He is an asset and need not settle for a boring job. One or two years of boredom are a popular limit. A good employee works hard and does extra to remedy any boredom. Some of the best companies in the CU were conceived by a person thinking as he washed toilets. In the meantime, a spotless bathroom was his trophy and calling card.

## 5.5 A Living from a Sport

People with physical jobs do not understand how people of the past threw, hit with a racquet, or kicked a ball for exercise. Yes, sports had become more a form of entertainment than a form of exercise, and the professional athletes provide added value if many people are entertained.

If the athletes have a small audience, they are paid poorly. Professional athlete, Robert Sleigh, AKiA Bob Sled, knows that well. Athletes also should finance the construction of stadiums or arenas where they play. Taxpayers should not tolerate goovernment funded facilities so the athletes can get rich playing a game.

The same principle should be applied to student loans. The university, not the taxpayers, should be on the hook if the student defaults on his loan. The loan should come from the university in the first place. Is “student loan” a Spanish phrase for “I cannot afford a family?”

What is the most common course taken by the richest alumni of an Uboca? That distinction belongs to basket weaving. It is safer than political science. A professional athlete would never alienate what audience he had by getting political. He must be respectful of the dumbernment or the people of different countries. Collecting stamps is a safer hobby than politics for any professional athlete about to insult half of his audience.

Runners of the CU love the Benevolent One and their country. The spoiled generation who do not appreciate they are blessed to be making a living from a sport should spend some time in Indonesia. They do not deserve free market capitalism, but without exception, they do not want it and flee to the MT Territories where they are free to use wind and solar for their intermittent power in an eyesore environment. They are also free to gamble, drink and smoke pot all they want in the MT Territories.

Alcohol and pot are referred to as simi, self-inflicted mental illness. Some need to have something good taken away to realize what they had was good especially when

it comes to intelligence or freedom. Simi lowers intelligence like the government of the MT Territories lowers freedom. There should be mandatory IQ tests so that people can see their IQ plummet as they use more and more simi. The brain cells, unfortunately, do not grow back. A freedom marker (a freedom index) may not be useful because it could be faked just like a democracy rating. Opposites such as intelligence and stupidity and freedom and tyranny are especially useful, but hard to measure. However, the smart ones, not on simi, know their ability to afford what they want to eat, possess and do has gone down.

In the MT Territories, the government helps those with addictions which is an admission they do realize it is better for a person not to be an addict. A beer or a glass of wine a day is certainly better than getting hammered frequently, but is still an addiction. The BO believed that if his subjects succeed, the country succeeds. On the other hand, the dumbernments of the MT Territories want their citizens to fail so they are dependent on the goovernment. That is job security for those providing the public trough.

The public trough always grows because shrinking it seems impossible like the destruction of entropy. For example, just the mention of privatizing CBC (the communist broadcasting corpse<sup>88</sup>), which promotes the climate change catastrophe hoax and the belief that carbon is a poison, makes several bureaucrats choke. That makes them angry and motivated to fight with an intensity that their jobs deserve and may never get.

---

<sup>88</sup> CBC, Rational Wiki, Retrieved April 19, 2025 from <https://rationalwiki.org/wiki/CBC>

## 5.6 Environmental Illness

When it comes to the environment, the MT Territories is in the environs of mental illness. There is an intense malady surrounding the environment. The best environmentalists are small c conservatives who believe in respect for the environment as a craftsman would respect his tools. The environment after all is the tool of humans to make their lives better. Large C conservatives, referring to the federal conservatives are duped if they believe sequestration of carbon is necessary. If carbon dioxide were indeed harmful which it is not, the benefits of the modern industrial society would still make the creation of carbon acceptable. Some harm from carbon would still be a bargain. However, mental illness takes effect because carbon is actually not harmful. It is plant food and essential for life on the planet.

Mental illness is not a jail of the mind but untreated mental illness is. If a society does not realize how good they have it and want to throw it all away in the hope of getting something better, they are suicidal and are thus mentally ill. They might as well be in favour of cutting off a healthy body part. They are just that insane. Build back better is just another lie. Repeating it many times does not make it true. It just makes it agitprop which is the mistruth of propaganda repeated by democratic plumbers or the mentally ill.

Cheap and readily available energy makes the economy hum. The government always thinks they must do something to help, but by stepping aside and not throwing bureaucrats at a problem, the government helps the most.

Cheap fossil fuels allow people to stop burning dung and wood, but more importantly, they help pull many people out of poverty around the world. This fact is ignored by small people who give meaning to their mt lives by crusading for the environment. It fills a huge hole made by the rejection of the existence of God. Therefore, it is next to impossible to tell them the error of their ways. Everything a protester wears or uses is probably made from oil. Fossil fuels make the world greener simply by providing an alternative to burning wood. Because CO<sub>2</sub> is released when cheap fossil fuels are burned, the Earth really goes green because more CO<sub>2</sub> increases the rate of photosynthesis.

The people who want everybody to be handicapped by electric vehicles (EV pathétique) are the same people who are suing to stop energy projects like new dams. The energy must come from somewhere. Not thinking is not necessarily mental illness, but when it is fanatical, it certainly is. The CU does not let foreign oil fund Eco terrorists and certainly would not allow private citizens to stop government projects through the courts, like the Site C dam, for example.

Why is such an important matter as the energy policy dictated by people too evil or too foolish to understand energy? Where are the adults in the room? The Benevolent One is fortunately and benevolently one of the adults in the room. A leader of a prosperous country must be. A leader of a country which used to be prosperous is not.

The BO realizes a small government is very important. He runs it as if the money were his own money, but since he is not corrupt, he does not scheme to actually make it his own money. Are speaking fees awarded to politicians who support the Paris climate accord a euphemism for kickbacks?

Danish economist, Bjorn Lomborg, believes carbon is a problem, but is called a climate denier because he thinks the money spent on the climate could be better spent helping the poor. The trillions spent in the name of the climate far exceeds the loss in GDP that climate could ever cause<sup>89</sup>.

Propaganda of the MT Territories, known as fake news, attack carbon and cheap fossil fuels. The goal is to drive out companies and the middle class so that government can run everything (deindustrialization and offshoring of manufacturing). The government seems to be there to help people out of problems, but government usually is the problem in the first place. Former US President Ronald

## 5.7 Goovernment Must Step Aside

Any country must have wealth creation from farming, manufacturing and natural resources. Taxing good government jobs to create more good government jobs is like a Ponzi scheme which will eventually fail. A country cannot survive with just government jobs supported by taxes and accumulating debt. It desperately needs wealth creation. The scheme named after Charles Ponzi is illegal and pays dividends to the original investors from the income contributed by later investors<sup>91</sup>.

The BO reduced costs to companies by nearly eliminating all regulations and by outlawing corporate income tax and unions. The BO also reduced energy costs, by not subsidizing wind and solar, at the same time, allowing the free market to choose nuclear and cheap fossil fuels.

A small country does not have the space nor the patience for low density forms of energy such as solar and wind which kill birds, displace animals and are environmental eyesores. Being good for the environment can still be done, but whatever is done must have a measurable, not a fictitious effect. Trillions have been spent on climate change, and nobody knows the effect except for larger governments and more bureaucracy.

It does not matter how necessary certain expenses are. They are still expenses that scares companies and foreign investments away. It is only the poor who do not have the luxury of moving, and it is only the clueless or corrupt politician who cannot grasp this concept. Exporting or offshoring companies effectively means losing jobs and the middle class. The Benevolent One reversed this process simply by keeping government small and allowing the invisible hand to do the rest.

The BO did not dictate much, but he resolved disputes and answered petitions which effectively kept a layer of common sense above the experts<sup>92</sup>. During any pandemic, health experts would foolishly suggest shutting down the economy to be safe. Level-

---

<sup>91</sup> Charles Ponzi, Wikipedia, Retrieved January 13, 2024 from [https://en.wikipedia.org/wiki/Charles\\_Ponzi](https://en.wikipedia.org/wiki/Charles_Ponzi)

<sup>92</sup> George Friedman Predicts the Next 50 Years of Global Affairs and the Importance of Space Domination, The Tucker Carlson Show, Premiered April 24, 2025, 80 minutes, Retrieved April 24, 2025 from <https://tucker Carlson.com/tucker-show-george-friedman>

headedness reigned, and the BO allowed no mandates. Masks and isolation were optional, and nothing was shutdown. Common sense and freedom from government regulations resulted in prosperous companies which grew the middle class by raising the poor.

In the CU, foreign companies constructed facilities. They also hired and trained local workers. Foreign workers who came with a company bought houses and contributed to the local economy. Some of those workers passed their skills on to the subjects of the Benevolent One.

The CU had a good labour force because the education system was excellent and did not ignore the trades. In the MT Territories, schools were architectural marvels with beautiful facades and lobbies. However, they did not have the space for proper shops, like auto repair, woodworking and metal working including CAD/CAM. A high school student in the CU was competent with a wide range of tools. They could even use a hammer properly. How difficult is that? Using a hammer is simple but must be done while wearing safety glasses.

The Benevolent One loved the laissez-faire form of government. He kept some control, but like his wife, la BO-m, he wanted a small government which only seemed possible in a dictatorship. Government begets more government. Whenever government gets control of anything, they make it bloated and run it into the ground.

The BO appreciated the value of small government and the ingenuity of private enterprise. The CU maintained a middle class with lots of opportunity from years of small government and oodles of individual entrepreneurs. The BO runs the country fairly and like a business. That business is minding his own business and not interfering.

A country cannot survive on taxation alone. It needs wealth creation from companies not under government control. In the CU, this creation of limited liability was not taxed at all because credit was given for the taxes contributed by the employees. Companies did not pay income tax, and they were not regulated out of existence. The government was thankful they created jobs. Money was also never double taxed or triple taxed. There was no death tax and very little property tax. Families of three

children or more paid no property tax. When the government is small, freedom can merge with economics. When the people are happy, the government is stable.

The BO did not want to interfere with the entrepreneurial spirit and the discovery process of free market capitalism. The market discovery process, a term coined by Israel Kirzner<sup>93</sup>, allows entrepreneurs to discover how good their product is by how well it sells. If they have a poor product, they will fail and go out of business. There is some short term pain for long term gain. They will succeed when they have a good product. The system finds good businesses, but if government interferes, that discovery process will fail.

A good example is wind power. Aeronautical engineers did not go into the business of wind turbines because they knew it was not a viable technology no matter how much they hated birds. However, after government mandates and subsidies, the equation changed, and the technology became falsely viable.

If a company masses a large debt, it is a failed company and it goes out of business. Why can that not happen to governments with a debt? Governments must be able to lose their credit rating and not be able to borrow money with a deficit (a budget which loses money) or a debt. At the very least, somebody in the dumberrment should be cancelled. Unfortunately, nobody in government gets cancelled for putting too much milk on his cereal (being a cereal killer) or even worse too much deficit on the debt.

The CU did not have a huge debt, and whenever it incurred one, every subsequent year a small percentage had to be paid back by law. Governments which backed loans so that nuclear power could be developed by private companies were just overstepping their jurisdiction. Their best contribution was removing regulations and to stop trying to run or own anything.

In the CU, people were honest. Therefore, banks could form and entrepreneurs could find enough investors if their idea was good. This concept did not work in corrupt

---

<sup>93</sup> Milei, Javier, President of Argentina, economist, former rock star and football goalie, His full speech to the World Economic Forum in Davos, Switzerland, January 18, 2024, National Post, Retrieved January 19, 2024 from <https://www.youtube.com/watch?v=4z44XP4u9Xs>

countries where the bank manager would abscond with the funds if enough money accumulated<sup>94</sup>. In the majority of countries, the easiest way to borrow money is from loan sharks and that is not conducive to entrepreneurial investment. High credit card interest rates were illegal in the CU because they fell into the category of loan sharking. Without honest and easy ways to get capital investment, big projects, by default, have a tendency to fall into the government's lap, and this leads to central planning not free market capitalism.

Wind and solar energy were available, but like the electric car, these were not competitive, and actually harmed the environment. This was understood by the overs and vehemently denied by the unders. The unders were so arrogant that they thought they could save or control the environment, and yet they were ignorant at best or corrupt at worst whenever solar and wind energies were involved.

Successful companies were always headed by overs. The unders then associated companies with overs and wanted the government in charge if that meant unders could be the bosses. Overs were in charge of oil companies and unders were in charge of emerging green companies. Things fell apart quickly when a capable person was not in charge (Ecclesiastes 10:5-6).

What the unders did not realize is that people who ran companies earned their positions with hard work and intelligence but really would have preferred to have the leisure and family time the unders enjoyed. How much of that time was spent complaining about their bosses and not forgiving their enemies, real or imagined? For their sake, hopefully none.

The key to a stable government is that debt repayment must be required by law, and money, it does not have, is not spent. Deficit spending was not allowed, and politicians and their staff were not paid if the money ran out. Having a capable leader sounds simple, but in actuality, it is hard to get. If the democratic plumbers do not eliminate democracy and freedom, the debt will.

---

<sup>94</sup> Conversation with Thorpe Watson about his time as a director for Kootenay Savings Credit Union in Trail, BC. He was a very capable director which was not always the case for an elected position (the winner of a popularity contest). He had a discussion with a fellow Credit Union Director (banker) from a country in the Caribbean at the Credit Union Forum in Vancouver, BC in 1997 (World Credit Union Conference), August 31, 2025, Trail, BC.

How much debt can be tolerated as a fraction of GDP? The debt becomes unsustainable when it grows to twice the GDP<sup>95</sup>, but the interest payments on such a high number is like stealing from the poor. In a healthy country with legitimate social programs, there should be no debt. Having no operating deficit should be a given, but in monetarily unhealthy countries, servicing a large debt makes a zero deficit difficult. Instead, there is enormous debt, not just at the federal level, but also at the provincial, the regional, the municipal and the personal levels. All hail to the creditors! They will truly be the new Caesar, the ruler not the salad. Nobody will afford Caesar salad. It is time to leave.

## 5.8 A Safety Net or a Fish Net

In any society, the people who are failed by the system must not be ignored. They must be helped, otherwise if there are enough of them, they will want to tear the system down. The BO realized it is important to help the poor, but he did not use it as an excuse to increase the bureaucracy. He also realized the importance of the union of a man and a woman and their resulting children. The family unit is quite important to stamp out poverty. A family would be extremely embarrassed if they had a member become homeless.

The revolutions which formed Vesputia were fueled by people ignored by corrupt politicians who loved pointless wars, increasing the bureaucracy and padding their own pockets. The people of the MT Territories were doomed because they did not recognize when a leader hated them. Politicians are an odious breed.

The people at the bottom cannot be ignored and should be given the opportunity to retrain. Otherwise, resentment, jealousy and hatred fester leading eventually to democratic plumbing. Helping the poor is important especially in the CU, but the Benevolent One does it with small government.

The BO makes it easier to help the poor by making as many people as possible prosperous with a vibrant and large middle class. There were almost no regulations, just a set of commonsense laws. There were many jobs including part-time jobs. In the CU, there were not many people in government jobs (at the public trough), but the private sector, when left alone by the goovernment, readily filled the void.

Charitable organizations, such as churches, were prolific and not controlled by the dumovernment. When the average citizen is well off, they tend to be more generous than in a democratic plumbing society with high inflation and high gas prices which make everybody poor and unhappy. Happy and prosperous people want a pristine environment free from garbage and homeless encampments.

The poor were never left to starve and always had some form of roof over their heads in retraining zones. Substance abuse was treated as a mental illness and not allowed in these zones. Substance abuse begets substance abuse. If only government were treated like the substance abuse or the mental illness it really is, then there would be more places to live like the CU. Poverty was attacked by targeting addictions and providing opportunities. There is an old saying that if a person is given a fish, he eats for the day, but if he is taught to fish or given a fish net, he eats for life.

Poverty is also reduced by making everything cheaper including Caesar salad dressing. The poor may never have a Caesar salad in a fancy restaurant but they can have one at home if they really think they are missing something.

The poor usually do not have the option of leaving, but they should take the advice of Jordan Peterson<sup>96</sup> and clean their own room. The rest of the house is next, then the yard, et cetera. This is the polite way of saying that people who cannot even keep their own room clean should not try to organize the world. It also follows that the easiest person to help is one who tries to help himself.

## 5.9 Smarmy Oil

A person will never understand Freeconomics properly, unless he realizes the importance of cheap and reliable energy. He also must understand why some attack smarmy oil and seemingly want high costs.

An oily person is sycophantic, smarmy, unctuous, fawning or oleaginous. Why the hate? Someone oily should be sainted with what oil has done for modern society and the poor. If a goovernment comes along and wants to clean house, throwing out the good and self-hate must be disguised by propaganda like build back better. However, the good must be conserved, and conservatives are not doing their job if they allow the good and the valuable to be thrown onto the trash heap. Even a simpleton knows that if he throws out an old pair of pants, he first removes anything valuable like a belt or a wallet. It is common cents and sense.

Even the language attacked oil long before spoiled clueless children, with a net zero IQ and “Just Stop Oil” T-shirts, threw soup at paintings in art museums<sup>97</sup>. Were they rallied and incited by the angry child leader, Greta Thunberg? This was not unlike the Nazi’s propaganda with angry children of their own and Mao Zedong’s Red Guards of China. In 2019, Michael Knowles felt sorry for the “mentally-challenged Thunberg” because the Baizuo were exploiting a child for political gain. For his statement, Fox News labelled him as “disgusting” but fortunately failed to cancel him<sup>98</sup>.

Propagandized people, like the worshippers of Thunberg, are hard to deal with. The argument for the climate fanatics or religious zealots, is over in their minds, and there is no listening to reason. They are likely anti God, but they hold onto their climate beliefs with a religious fervor.

<sup>98</sup> Michael Knowles: Attacks on Christians, Norm McDonald, and Leaving Atheism for Catholicism, The Tucker Carlson Show, Premiered September 3, 2025, 135 minutes, Retrieved September 03, 2025 from <https://tuckercarlson.com/tucker-show-michael-knowles>

Oil is great. It provides cheap energy which helps people out of poverty. Oil is also used to make so many different products such as clothing, fertilizers, plastics and many more things. Burning fuel from oil also eliminates the respiratory problems of burning wood and dung to cook food.

Fossil fuels are such a benefit to humanity that one starts to wonder if the left, which opposes them, is just antihuman. Is this something to do with the movement to depopulate the Earth? Also not liking nuclear power suggests the affirmative. Nuclear energy can significantly increase the life of the current supply of oil.

Can the Earth feed a growing population? The Earth was already supposed to have run out of food, but because of innovation and fertilizers (some thanks to oil), that has not yet happened.

The left has always looked to the oil companies with jealousy. The oil belongs to everybody in a country, so why should the oil executives get so rich? Those people are not aware of how great a service the oil executives are actually doing. It is not trivial running an oil company.

The goobernment could not possibly run an oil company, but a CEO of an oil company certainly has the skills to run the dumbernment and more than likely do it well. The BO is living proof of that. In practice, a CEO of an oil company would likely fail because of the bureaucracy and the mindset of the workers and the goobernment suppliers.

Moving companies will ask a perspective client, “Who is paying for the move?”

The logic is that if a company or goobernment is paying for the move, they will hike the price, and the individual will go along with the theft. However, the best response, even if it is a lie, is, “Me, please give me a deal or I will go to a competitor.”

This is like the taxpayer. The goobernment gets overcharged and fleeced, and nobody protects the taxpayers’ interests. When a politician tries to do the right thing for these taxpayers, he is attacked by the media and the bureaucracy with a wave of hate and propaganda which would turn his own mother against him.

Furthermore, the dumbgovernment is an organization which would not fire a person for incompetence, unproductivity, laziness, mistakes or corruption. It is a friend or big brother to all of its employees and rewards employees for length of service not skill nor productivity. As a result, it can only run something into the ground.

The left claims that energy is so important that they must have a say. This results in a leftist goovernment getting involved in energy. This means energy becomes centrally planned. That is a disaster. The invisible hand of economics must not be hand cuffed. If the dumbgovernment stays out, the free market will find the correct energy solutions including nuclear in addition to fossil fuels.

There is also the problem of skill and ability of the CEO of a company and the CEO of the goovernment. One has worked hard and climbed his way through the ranks while the other just won a popularity contest called an election (elect and shun). The average intelligent person could not be a CEO of an oil company, not without a nervous breakdown.

The oil companies have a slightly different perspective. They do all the work, and the dumbgovernment contributes nothing positive and yet sits back and collects taxes on the oil and on the wages. As if that is not already too much, there is also a corporate tax.

If green energy can be used instead of oil, the goovernment can exert more control with green subsidies and regulations restricting oil exploration. An attack on oil is essentially an attack on free market capitalism and its invisible hand. The dumbgovernment, with its lack of intelligence with regard to energy and the plethora of regulations, has found a way to handcuff the invisible hand.

In addition to goovernmental control, there is an altruistic component to the attack on oil. If it stays in the ground, the future generations will have it, but they will not be living in a first world country. That is a huge cost. However, there is no need to panic because at the current rate of consumption, there is about 1,000 years of oil

left. However, it could easily be more than 1,000 if new oil is found and new techniques, like fracking, are discovered<sup>99</sup>.

An attack on energy makes everything expensive and the effect is cumulative. An item manufactured in this energy tyranny is affected by the increased costs to all of its suppliers as well as its increased operating costs and the increased costs of getting the item (often by truck which is of course affected by high energy costs) to market. The cost of living shoots through the roof, and manufacturing and prosperity leave.

Wealth creation leaves and is replaced by the viruses of dumbernment and debt enlargement. When the politicians are cornered by an angry public faced with inflation, all they ever seem to do is change the definition of inflation and recession. They do not stop printing money, and they never stop attacking oil. The poor and the middle class are most affected by the attack on energy, but it is allegedly for their own good which they will never see nor understand.

## **6. Freeducation**

## 6.1 Education or Ideological Training?

In the MT Territories, education, like the debt, was ignored. The students learned that the system of Western civilization is evil and that democratic plumbing is not only compassionate but, if done properly, leads to utopia.

The people who worked hard all their life were outraged because if it were not for the evil overs, they could have taken it easy and been paid by the government to do nothing. Contributing to society, just like the debt, could have been someone else's problem.

Democratic plumbers believe that free market capitalism exists only to make a few rich, and the equal application of poverty is better. However, without the creation of wealth by free market capitalism, the government eventually fails like all Ponzi schemes.

It is all nice that government is kept small and costs to companies are low, but if the country has a lousy education system, the experiment called a country can still be a failure. All companies are prepared for some training of their employees, but prefer to hire highly skilled workers who are keen to learn. Employers prefer that their new hires are a product of a good education system. Education sets a student up for a good job, but it also sets a company with a good employee.

In the MT Territories, an enterprising academic may think about running a business to tutor the slower students to get them at their proper math level. The education system must be able to pick up students who are left behind. Sounds simple. All a person has to do is to read the curriculum and make a textbook for Amazon Kindle called, "Bring your child up to speed in Math." This can be done in any subject the entrepreneur enjoys.

However, the task is not that simple. The curriculum for Math in the MT Territories is written down in words satisfying the DEI (diversity, equity or equality of outcome not opportunity, and inclusion) agenda. It is complete and utter gobbledygook which sets up students for failure. Such a system will not respect standardized tests because

they will show how much a failure the teachers really are compared to countries who do not mess with a child's education for the sake of politics.

The curriculum and learning schedule (including exams) were readily available to the public in the CU unlike Vesputia. The goal of education in the MT Territories was to keep the masses uneducated and compliant. The motto was "Nobody is left behind" which really meant that nobody could advance. The sad reality was that the teachers (not komissars) were so poor themselves, they could not handle or challenge an advanced student, but were always happy to take credit for the student's natural brilliance. A socialist loves taking credit for doing nothing. That is their invisible hand.

The key to a proper education system is to provide competition and reduce the effect of the teacher's conflict of interest. Teachers are strongly in favor of unions and that comes clearly across in teaching kids that companies lead to fascism in addition to the lie that socialism and big government are good. Furthermore, the students are taught that unions are good, but unions add another layer of bureaucracy and effectively reduce the workers' pay. Unions are not altruistic. Someone pays for them. Most students certainly cheer for the teachers during strikes, not realizing the teachers are effectively striking against their parents who foot the bill in their taxes.

There should be school choice and funding choice which means the parents choose the school, and the taxpayers decide which school gets their taxes. The poor schools teaching ideology will fail because of low attendance. Those schools where education is fun and fulfilling will have full classrooms.

Most people realize the importance of education, but some come to this conclusion too late in a child's schooling after years of low marks. Those people are willing to incur huge student debt in order to get a higher education. This is so wrong even though education is the best road out of poverty, but debt is not. Incurring a debt delays the ability to support a family and buy a home.

A lot of the learning facilitated by a higher education could have been done when it was free in grade school and certainly could be done later in life with a library card.

The blasé attitude to debt at all levels from the individual to the government is just wrong.

The best education system is one which allows a student to learn on his own and contest exams, courses and years of Uboca. If a student contests a course and succeeds, he saves money and time and does not incur a high debt. If he fails to get 80%, he simply takes the course.

A leader of any country never ignores education, but for the good of the student, he probably should. The more government gets involved, the more centrally planned something becomes and the worse the result.

Education serves to raise the human spirit, but it also promotes the love of country and leads to employment. It should not simply be a tool to step through hoops just to get a good job. Education should be based on a love for knowledge, both by the komissars who share the knowledge and by the students who lap it up. It is only natural that if somebody loves doing something, they will love teaching it to share the pleasure they get from the activity.

Education also leads to a good sense of community and even to a good hobby. If the hobby is done well enough, it may lead to employment from the hobby itself or from teaching the hobby. Employment is just an added bonus because exercising the brain is just as important as exercising the body, and both are fun and absolutely necessary.

In a healthy country, the students must be taught, the Lord's Prayer, the National Anthem and God Save the King (Charles III). God, King and country must be part of the daily routine. In the Carolean<sup>100</sup> (not Chuckian) era and the subsequent Gulielean Era<sup>101</sup> (William V), children must be taught to love their country and her history. They must appreciate how good Christian values and western civilization

---

<sup>100</sup> Smith, Saphora, What will era of King Charles III be known as? Prime minister Liz Truss has referred to 'Carolean age' The Independent, September 11, 2022 20:56 BST, Retrieved January 30, 2024 from <https://www.independent.co.uk/news/uk/home-news/king-charles-iii-carolean-era-caroline-b2164914.html>

<sup>101</sup> What will William V. era be called? Reddit.com, Retrieved April 16, 2025 from [https://www.reddit.com/r/royalfamily/comments/133qfne/what\\_will\\_william\\_v\\_era\\_be\\_called/](https://www.reddit.com/r/royalfamily/comments/133qfne/what_will_william_v_era_be_called/)

really are. Good things took years to develop. They must think for themselves and not be taken in by propaganda.

Students must be thankful for prosperity, education and leisure activities. They must be taught that they cannot take education for granted and that work and leisure must be balanced. The best education system is one that does not limit any student and produces what most dictators hate above all, independent thinkers.

The best way to ruin an education system is to pay attention to an outcry against leaving poor students behind. Denying poor students a higher education later in life seems like too harsh a punishment. However, overturning the meritocracy punishes the good students as well and makes the education system poor for everybody.

The bureaucrats with dumb kids (like father like son or like mother like daughter) do not want them to miss out on high paying jobs which come with a good education. That natural parental instinct is not surprising, but it is wrong. First of all, the assumption that a university education is better than the trades is just dead wrong because it depends on the student.

If a person is a poor student in grade school, he always should be given the opportunity to turn things around later in life when he gets his act together. Any system should allow a person to work hard, contest exams, attend night school and get a higher education if he merits it. Having a system that does not leave anybody behind just makes it a poor system for everybody even the good students.

Does a student need to learn that the Ural River forms the border between Europe and Asia or that Turkey spans two continents? Probably not, but a geography course would be remiss if this was not mentioned. However a person travelling to Russia and Turkey should do a little research before the trip.

Somebody could become an artist or a journalist after being a Math and Science whizz (whiz is also correct for those who do not like ZZ Top or Texan blues) in school. It would be nice that high school give a broader education, but at the very least it should give students the tools and desire to learn on their own. Education does not end when school ends, it's just harder to be wrong. A person who can admit

to being wrong is open to learning even outside of school. Such a person can overcome propaganda when faced with the facts. That is impossible with ideological training and a refusal to admit being wrong.

## 6.2 Stepping Stone Out of Poverty

There are many countries where a good education is not readily available, so the poor are trapped in poverty. Under Dictator Suharto (1967 to 1998<sup>102</sup>), Indonesian children only got a half day of education because there were too many students for the resources provided such as schoolrooms and desks. Half of the students went to school in the morning and the other half went in the afternoon. They were taught to love their country and its dictator, but they were not taught to think independently and not realize they could be better off. The internet came along and may have changed people's perception, but education rife with propaganda can still be a trap. Employers know how good or how poor the school system is. They flock to the CU because the education system is a full day and is so good.

In other poor countries like Bolivia and Peru, for example, students cannot afford a free education provided by the government. Yes, that statement is correct. They cannot afford free education. If the parents beg in the streets to feed their families, the tourists brush them aside, and their begging is not that effective.

However, if their children beg, the tourists are shocked and are saddened at the sight of these destitute kids who, in the words of the tourists, "should be in school." Every kid should be able to enjoy a Western-style childhood. The emotions evoked loosen and spring open up the purse strings. The money, the urchins earn, make it impossible for the parents to allow them to go to school. What ends up happening is that good-intentioned tourists who support begging are robbing the kids of an education which is the only path of success they have. The tourists who give a poor kid candy never give him an accompanying voucher for dental work but feel good for being nice.

That sounds familiar. Leaders who give out free money by ignoring the debt may be good intentioned, but they really are not. It is also not free money. The cost is just deferred. Future generations are being robbed of prosperity. The BO does not ignore the debt. He pays it off and does not increase it one little bit. He could never trust that the creditors would have the fones' best interest at heart. The BO also realizes

---

<sup>102</sup> Suharto, Wikipedia, Retrieved July 31, 2025 from <https://en.wikipedia.org/wiki/Suharto>

there is no free lunch. He cannot pay the salaries of government employees strictly through taxation.

The electorate is always happy with free money, but everybody would be better off with no debt and a free market education system. The opportunities which come with an unfettered education system (Freeducation with school and funding choice and contestable exams) is the real free money and the true road out of poverty.

## 6.3 Two Streams

When it came to water, there were many streams in the CU. However, when it came to education or freeducation, there were only two, the academic (university) and the trades (vocation). The CU knew education was the key to prosperity, but having one stream, like in the MT Territories, would cause boredom in students not interested in the academics.

How often have you heard a cabinet maker or a heavy duty mechanic say, “My life would only be complete if I knew Pi ( $\pi$ ) to ten decimal places?” 3.141592653589. There are twelve, so it is really complete. It is hard imagine living a fulfilled life without knowing  $\pi^4 + \pi^5 = e^6$ . That fun “fact” came from Facebook<sup>103</sup>. The equal sign is not accurate like it would be for rational numbers. An academic person may have fun with that statement, but would be lost fixing a leaky faucet. Some people are just suited to a trade, just like some are suited to the academics. Students were allowed to choose the stream they or their parents wanted.

Sam and his sisters were on the academic track of the class system. Every day they passed below the entrance sign above the main door which boldly displayed the CUs words, “Through knowledge, happiness will be found.” It did not say how much knowledge and how much happiness. That depended on the individual. The CU was a land of equal opportunity but certainly not a land of evil equal outcomes.

Nearby, there was the class system for the trades. The sign there said, “Through skill, happiness will be found.” Those students only had to endure at most one hour a day combined of math, English, and history. They were taught to read, do their taxes, and love their country. It should seem odd that patriotism was not a given. Classes on patriotism were a holdover from the past because getting rid of a class on patriotism seemed unpatriotic. An easy course gave confidence to the students of the non-academic stream.

---

<sup>103</sup> Fun Fact, Maths With Muza, Facebook Reel, Retrieved September 2, 2025 from <https://www.facebook.com/reel/2032217977518759>

The rest of the day was spent in the shops, music halls, sports facilities, the kitchens and the sewing rooms. There were drafting and computer rooms as well. Students often learned to code because they wanted to make computer games that were lucrative in foreign countries. They were not told to code because the coal mines were shut down. That would not happen because energy was recognized as being of an utmost importance. With so many trades possible, it was a crime for a student to look where the clock should have been for a good portion of the day because he was in the wrong class system.

The trades stream went to Grade 11. Students were allowed to challenge the final exams and leave school earlier to work as an apprentice. That could be any age the qualifications were attained. Even if a student left as early as Grade 8, he would come back for graduation week and share in the festivities with the students of his same age graduating from the academic stream at the end of Grade 12. Spouses and kids would also be welcome. A good education should include knowing what a student is missing out on. That sentence just ended with two prepositions, but even one preposition is no longer an offense except in Latin<sup>104</sup>.

Students were not encouraged to get more learning by the komissars because of a conflict of interest. Komissars were there for the students not for their own job security. If they were any good, job security came automatically.

Not only that, but the trades were also highly respected and considered more important than many degrees. Plumbers did not need to be philosopher plumbers.

All diplomas and degrees were given with or without honours as well as with or without integrity. Any student, who, on two occasions, was caught floating or copying, even just an assignment, was given the diploma or degree without integrity. The honours distinction meant that a high mark and integrity had been maintained throughout the studies.

---

<sup>104</sup> Can you end a sentence with a preposition? Yes, you can end a sentence with a preposition, Merriem-Webster Dictionary, Retrieved August 31, 2025 from <https://www.merriam-webster.com/grammar/prepositions-ending-a-sentence-with>

A student in the MT Territories could copy his way to a degree. He was only fooling himself. He would not get hired if he did not learn his degree. If he did get hired, then why was the degree so long? Obviously, what he did not learn is not really needed if that was actually the case. Students should be allowed to contest exams and years and get a family sooner rather than later.

However, a copier and a floater probably will take an extra year and pay more tuition fees. Professors have a conflict in interest. They will never tell a student he should be in the trades because they want the tuition fees. They can tell which students will have a useless degree and will be entering the trades after Uboca (four and five years late with student loans), but will get into trouble for warning the students.

A professor telling a student he should be in a trade and not delay family life with a huge student debt will not make his boss happy. His boss wants those years of tuition fees which includes a bonus year if the student is so poor that he takes an extra year. His boss cannot look bad for firing a professor who has the student's back, but he will latch on to any other excuse he can to get rid of that professor, hypothetically of course. Do professors have the student's back? Officially yes, but unofficially that is not where their wallet is.

Are student loans bad? That depends on the student and the ability of the student to pay back the loan once he gets his degree. An engineer, doctor or lawyer, if he likes his job and stays with it, will be able to pay back a student loan fairly easily. However, that money may be better spent on a family and a house, but at least he got a good degree and a high paying job.

Is that fair for the art student who will likely be working for a minimum wage after his degree? Life is not fair. People pay for bad decisions all the time. Sometimes, students pay for bad decisions because their professors want students for their own wage. The one thing for certain is that the university should be on the hook for all student loans if the student declares bankruptcy or has a low paying job after the degree. Student loans should have a time limit before the university must pay.

Sam loved the academic classes. He did so well that nobody would believe otherwise. Students were attentive in the class system because of interest, not fear.

He often worked as a tutor after the class system. Some kids really needed his help because they would get lost and drop further behind. Sam assessed what basics they were missing and helped them catch up (ketchup, but hold the mouse turd or misclick), so they could understand what currently was being taught. He unequivocally refused to do their homework but gave them the tools so that they could do it on their own.

Some parents could not admit, their son or daughter was simply better in the trades. They had a dream their kids would go to the Uboca they could not. Family made university possible, but university should not make family impossible. Family is important. If professors were as wise as they profess, they would teach that.

Everything including the answers in Uboca was by word of mouth from wise sages. Traditions and history were passed from one generation to the next in this fashion. Ubocas were created in that spirit. A good Uboca would never dream of killing the tradition of family.

Parents' dreams gave Sam work, so he did not care. Sam could see that some students were just not for the academics, so he often said to himself, "Je m'en fiche" or "Ça m'est égal." Repetition meant he really did not care. The second expression was better because it sounded mathematical.

A lot of students got good employment and did not need the further education of Uboca. The academic students pursued advanced education unless better offers came along. U is for university and boca is Spanish for mouth. The Ubocas of the past often made the students angry and hate themselves and their country. They became bitter mouthy citizens. Many students were also saddled with crippling (family preventing) debt. The only debt that should exist was a deficit of sunlight in shadows (DoS). If Windows is that much better than DOS, then why are so many updates and versions needed?

There were only two tracks, the academics, and the trades. What if a student failed both tracks? In the past, a failed student could become a politician or a civil servant. James Bond 007 was a civil servant. Was he a failed student? That is not important.

However, the Benevolent One only wanted qualified people to handle his subjects' hard-earned money that was collected as taxes.

A student who failed both tracks could still find a job cleaning toilets and work hard to get promotions. A hard worker was still a value to the community and instilled a good work ethic in his children. The BO did not reward him by setting a minimum wage because he was against visible handcuffs (regulations which make the invisible hand visible and ineffective) on the invisible hand, but the BO kept costs low. That is an effective raise. A rise in tide raises all ships because a society, better off as a whole, raises the bottom rung. Artists are starving if they are any good, but their sales are also better with limited government. People are less likely to donate to charity or to buy luxury items when the government constantly has a hand in their pockets.

Western kids having to work is actually not a bad thing. They learn the value of hard work and money, and they learn to not expect everything to be handed to them. They understand that debts must be paid back. They see firsthand how education opens the door to higher paying jobs which are not coffee-break jobs.

Getting and supporting a family is really important, but university may cause someone to lose sight of that. There is nothing wrong with having a trade, a family and a library card to learn something about philosophy and the Arts.

Once the youth expect everything to be handed to them, they will end up throwing tomato soup on paintings in National galleries to protest oil<sup>105</sup>. Protests like that illustrate how soft people have become and how poor the education system really is. “Hard men make good times, good times make soft men, and soft men make bad times<sup>106</sup>.”

<sup>106</sup> The Tucker Carlson interview of Alex Jones, The Tucker Carlson Encounter, 92 minutes, Published December 7, 2023, Retrieved January 17, 2024 from <https://tuckercarlson.com/the-tucker-carlson-encounter-alex-jones/>

“Nobody is left behind” means nobody gets ahead even with hard work. Without hard work, nobody pushes the final frontier of the mind. The mind stagnates.

An education system which has the motto “Nobody is left behind” is likely too ideological and too poor. People may have had good intentions with that motto, but there has been enough time to see there is a need for something better such as “Nobody is bored and learning is not limited.” That may be the main difference between education and freeducation. Education should be free from indoctrination and propaganda. The climate hoax scares children, but the adults should be scared by indoctrinated bored children. They should be allowed to excel in either stream, not just one, or everybody will be up the single stream without a paddle.

## 6.4 Promotion and Relegation

An education system without competition or one controlled by the goovernment will have the main purpose to serve itself not the students. An education system without corruption is the key to a young person's success as long as the student is willing to work hard and jump through the hoops the komissars present.

Getting a diploma is not the key, but doing the work to get the diploma is. The students must take standardized tests to prove the work was done and to give legitimacy to high marks.

School choice, standardized testing and no goovernment involvement make for a better education system. In the CU, there is not only school choice and little goovernment involvement, but there is also a choice of stream, academic or trades. Sure, the taxpayer pays for education but gets to decide which school (and stream) gets his tax dollars.

It is a sad day when education does the student no good, and the students good and bad, know it and the teachers, good but mostly bad, know it. What is the point of a car mechanic or a plumber knowing advanced Math or Physics?

In the MT Territories, the goovernment always suggests more dumbernment involvement to fix the education problem. They actually want it to stay broken so they can continually throw more money and bureaucrats at the problem. No one disputes the system is broken, just the way to fix it.

First, the dumbernment does not want to fix it, and second, all they have to do to fix it is to allow school choice for students and for taxpayers; to sell (divest) public buildings; and to step aside. That is the solution which is just as true as photosynthesis needing carbon dioxide, but it is a big ask.

In the academic stream, even the classes were streamed. Each subject had an honours section, a rapids section and then the lower general sections. Honours had the highest marks, rapids the second highest, and the bottom general section had the lowest. A

student could drop and rise depending on his marks. The students with the low marks of the lowest class would be relegated to the trades stream. The highest marks of the trades stream had the option of promotion to the academic stream.

In the CU, education was just as important as professional sports or perhaps more so, therefore, the promotion and relegation system of English professional soccer was used. England was correct to have the grammar school system before it fell apart because of equity and **DEI** which **should die**. The old grammar school system of England is also a good model, but the honours, rapids and general system allows more fluidity being in the same location. Participation trophies wreck sports, and nobody would dare hold back a good athlete. The same applies to the academics in the CU.

## 7. The Discovery of Gold

Houses in the CU all have basements. They are necessary because if the foundations are above the frost line, frost heaving would cause the houses to tilt and perhaps collapse. This is probably why Texans do not have a high basement priority. They do not get much frost heaving, just hurricanes and flash floods. The CU is north enough to have very cold winters. There is always a crawlspace if the basement is not under the whole house. Every house was built on a strong foundation, not on air. This applies to students equally as it does to buildings.

The best memory Sam had of his youth was the time he spent in the crawlspace under the house. The nuclear wars had not forced him there, his imagination had. The wars had not even been that close. The only evidence of any upheaval was what he had been told. The Confederated Union remained safe, although it was surrounded by inhospitable terrain. It was the Switzerland in a sea of turmoil. It was not an island at all except figuratively. It was on an inland sea, a large saltwater lake with tides called the Caspian Sea. It has a salinity the third of most seawater. It is the world's largest lake, but not as deep as the largest freshwater body, Lake Baikal<sup>107</sup>. It is bordered by three Stans, the Stan Stan, Kazakhstan and Turkmenistan<sup>108</sup>.

How did the fantastic occur? A lake with tides, seems extraordinary, but that was normal to Sam. Well, the end of the world must have been involved somehow, right? Of course, and Presbyterian terrorists were somehow responsible for the nuclear war that isolated Sam's little country from the rest of the world. It could not possibly be the fault of the Benevolent One, the benign dictator whom Sam O'Shea worshipped his entire short life.

Sam was proud of his country, his leader, and the flag. The flag used to be the hammer and the sickle of the democratic plumbing republic of the former Stan Soviétique, but currently, it was blue with a yellow sailing ship. Sam thought it was patriotic to be a sailor himself. On any flagpole, a flag with the yellow ship was

above the one with blue, white, and red vertical stripes from left to right. It was reminiscent of the *Voice of Fire* painting by Barnett Newman<sup>109</sup>, with vertical red and blue stripes, but much less expensive.

There had been nuclear wars in the MT, but the closest the O'Shea family had to a bomb shelter was the fruit cellar. It was used for wine and food and sometimes as a hiding spot for the C80s (C-A-Ts), but for Sam, it did not have the allure the crawlspace had.

He often made secret coded messages by candlelight in passageways through all the cardboard boxes in storage. There was always a breeze outside that would have blown out any of the candles he took to the dirty space. Father had just given Sam a brand-new candle which was meant for the celebration of the Benevolent One, but Sam said his prayers to him when he lit the candle. If he said, "Praise the leader," he was doing nothing wrong.

One day, when Sam was burying secret messages in the dirt portion of the crawlspace, he found a buried box. He was excited because, at the time, he had been reading *Treasure Island* by Robert Louis Stevenson, and he could just picture all the gold doubloons that lie within. Yes, Sam did not have video games and television for entertainment. Television is a modern old English word meaning propaganda, a true idiot box. Like his entire family, he read books, played cards and conversed. What a strange land.

He dug for the rest of the afternoon just to uncover the buried chest. Even when he had it mostly free of dirt, he could not budge it. It was so heavy that it felt like it was cemented into its hole. For help, he sought out his father in his upstairs den.

Sam, excited and out of breath, stood in front of his father with a shovel in his dirty hands. The farmer put aside his book, and his eyes surveyed the dirt that covered his oldest child's clothes. Before Sam could blurt anything out, he queried, "Your laundry will be harder this week. You haven't struck a water main, have you?"

---

<sup>109</sup> Newman, Barnett, *Voice of Fire*, Retrieved July 10, 2020 from <http://www.barnettnewman.com/voice-of-fire/>

“No, of course not. It is dirt, not mud. I have found a chest of gold, and I please need your help to open it.” Sam was still out of breath from the excitement of discovery, either that or from crawling out of the dark damp hole and running up the stairs.

Father went down to the basement and looked over what had been uncovered, ‘Well, this chest must be from a previous owner, way back before the nuclear wars. How heavy is it?’

Sam said, “It weighs a ton.”

“Metric tonne or Imperial ton?” His father asked with a smile.

All Sam knew for sure was that it was heavier than he could lift. With a loud grunt, his father lifted it down to the floor of the basement. That ruled out the cement and a ton.

“Get a hammer and safety glasses, son.”

The hammer was his preferred tool and his favourite key. With one swing, the box was opened, and Sam held his breath as the lid was raised. Any dreams of gold were dashed as he could only see books.

A book was not gold except in purpose because a collection of writings could move a mind from an ordinary place to an exceptional one. A book was a ford which was for one’s reading delight and for occasional reading daily. Important things are repeated twice for emphasis. When the quality of the Ford vehicle went down perhaps because of goobernment interference or the poor quality of Monday mornings and Friday afternoons, Ford became one of two acronyms. Found on the road dead or fix or repair daily. How ironic is it that those two acronyms more accurately describe the electric vehicle, the EV pathétique to a tee than any Ford vehicle?

With a brand new battery in warm weather with super charging stations everywhere, the EV pathétique would still suck and Jack Kerouac’s book would be *Off Road Charging*. Not as exciting as *On the Road*. A cross country trip would be impossible

unless the country was a small one like the Vatican City, Monaco, Nauru, Tuvalu, San Marino, Lichtenstein ... Andorra ... Taiwan, et cetera<sup>110</sup>.

Books, like the Ford HcarBs (hydrocarbon burner or gas guzzler) of the past, take the reader away to fun destinations. Henry Ford (1863-1947<sup>111</sup>) created the first assembly line and made a product many could afford. It came in any colour they wanted as long as it was black. The leaders of the MT Territories made such a product prohibitively expensive, awkward to use and really only good for parking lots. They were clueless and made Henry Ford roll in his grave.

While Henry Ford made cars for the masses, the Green New Steal made them available only to the rich. The electric vehicle, or the EV pathétique, is not only more environmentally damaging than a normal gas guzzler it attempted to replace at a greater expense, but it will go down as the biggest white elephant in history. Solar farms and wind turbines are also vying for this title. Dumbernment subsidies increase the debt thus robbing generations not yet born of their freedom.

One would think the white elephants would use all the white paint available, but there was still enough left over to white wash with propaganda the dirty reality of exploding vehicles, child labour for raw materials, battery cycle life, disposal difficulties, expensive battery replacement, cold weather difficulties, and long distance travelling impossibilities. That same propaganda will also turn a blind eye to the millions of birds (small and large) and bats killed by wind farms. With gas cars being vilified and practically useless, the names of cars were available for the names of other things like fords and porchas, for example.

“Maybe, the gold is under the fords,” Sam hoped and started to remove the top layer. He then realized, books were good. That just cut out the middleman. If the chest had gold, he would have used the gold to buy pictures, and then he would have used the pictures to buy what he liked, and books were top of that list. A person, in the MT Territories not enthralled with reading, would hardly spend money on homework he did not like. However, for Sam, these were indeed golden books.

<sup>111</sup> Henry Ford, Wikipedia, Retrieved December 7, 2024 from [https://en.wikipedia.org/wiki/Henry\\_Ford](https://en.wikipedia.org/wiki/Henry_Ford)

“Careful, son, these are old books from a time back when fords were burned.”

“Why were fords burned?”

“To erase the past to create a new present. Some with mould on the brain incorrectly think that the past should be ignored because thinking of it leads to brain damage. A present that could repeat the mistakes of the past is never a pleasant present to have, and that is not plaisantant<sup>112</sup>.” French words often appear in conversation, but to the people of the CU, it is just their language.

“Examples from history should stop any country from voluntarily getting democratic plumbing ever again. Therefore, people, usually full of hate and laziness, wanting such a deadly system, must erase or discredit history. Therefore, m’old or mould is not good, but old is. Old is a lot of years with a full life, and mould involves a lot of sitting on a couch.”

“Oh, that sounds as heavy as the chest.”

“Yes.”

Sam shortly discovered that the lower layer was also fords under which, there was no gold. A pirate, like the one-legged cook on the Hispaniola, namely Long John Silver, would not have had much interest in this box. He likely could not read, and it was not his parrot’s namesake’s (Captain Flint) buried treasure. It was certainly not worth a ransom.

Even though there was no gold, Sam was fascinated with fords considered important or valuable enough to be buried. They were saved from the book burnings of the past. He could only guess why they were forgotten. Perhaps the owner was afraid the Benevolent One would not approve.

---

<sup>112</sup> joking

Father suggested that he could have lost his mind and forgot about them. Only older people would think of that, and only younger people do not appreciate that no matter how smart they are, they will eventually be less smart and more like their parents. Regardless, more important things must have been on his mind.

Sam spent the next few hours out of the crawlspace sprawled out on the basement floor looking over the golden books. There were many journals as well as the published works. Was the owner of the chest a published author? It seemed not unless he went by many pseudonyms. Why would a person need more than one nom de plume? Would a sobriquet become an assumed name or a pen name? Sam had no idea.

The books all looked well read. There were titles sorted by author such as the following.

*Walden or Life in the Woods* by David Henry Thoreau (1854)  
*A Brilliant Madness* by Patty Duke and Gloria Hochman (1992)  
*Handmaid's Tale* by Margaret Atwood (1985)  
!

*The Travels* by Marco Polo (1298-1299)  
*Hitch Hikers' Guide to the Galaxy* by Douglas Adams (1979)  
*Emperor's New Clothes* by Hans Christian Andersen (1837)

*Strange Case of Dr. Jekyll and Mr. Hyde* by Robert Louis Stevenson (1886)  
*Odyssey* by Homer (circa 750 BC-650 BC)

*Gulliver's Travels* by Jonathan Swift (1726)  
*Retouched with Fire* by Kay Redfield Jamison<sup>113</sup> (1993)  
*Emerald City of Oz* by L. Frank Baum (1910)  
*Animal Farm* by George Orwell (1945)  
*The Picture of Dorian Gray* by Oscar Wilde (1891)

*Lost Horizon* by James Hilton (1933)  
*Old Man and the Sea* by Ernest Hemingway (1952)  
*Romeo and Juliet* by William Shakespeare (1597)  
*Doors of Perception* by Aldous Huxley (1954)

*Beowulf* by Anon (circa 975-1025 AD)

---

<sup>113</sup> Jamison, Kay Redfield, *Touched with Fire, Manic-Depressive Illness and The Artistic Temperament*, New York:Free Press Paperbacks, Simon & Schuster Inc., 1993.

*On the Road* by Jack Kerouac (1957)

*Civil Disobedience* by David Henry Thoreau (1849)

*A Brave New World* by Aldous Huxley (1932)

*Nineteen Eighty-Four* (1984) by George Orwell (1949)<sup>114</sup>

*Sun Also Rises* by Ernest Hemingway (1926)

*Exodus* by Leon Yuris (1958)

*Alice in Wonderland* by Lewis Carroll (1865)

*You Can't Go Home Again* by Thomas Wolfe (1947)

*One Flew Over the Cuckoo's Nest* by Ken Kesey (1962)

*Uncle Tom's Cabin* by Harriet Beecher Stowe (1852)

*Jonathan Livingston Seagull* by Richard Bach (1970)

*Pickwick Papers* by Charles Dickens (1837)

*Dear Theo* by Vincent van Gogh (1914)

*A Tale of Two Cities* by Charles Dickens (1959)

*The Prince* by Niccolò Machiavelli (1532)

*A Moveable Feast* by Ernest Hemingway (1964)

*Chrysalids* by John Wyndham (1955)

*A Room of One's Own* by Virginia Woolf (1929)

*Sunflowers* by Sheramy Bundrick (2009)

*The Time Traveler's Wife* by Audrey Niffenegger (2003)

This was the Wah! Signal, not the WOW! Signal. Wah! The so great Lord BO can see you, JP Datacast. Who is JP Datacast?

In addition to these published books, there were a whole wealth of journals filled with voluminous writing (VW). *The Prince* was the only book in pristine condition, and *The Doors of Perception* was easily in the worst condition. Was that indicative of love or neglect? When it came to books or fords, the used look meant love.

Were these radical books? Sam could not wait to find out. He picked up the book by Robert Louis Stevenson because it was an author he already knew, but his eyes (his doors of perception) were immediately diverted to the only red journal in the pile.

---

<sup>114</sup> George Orwell wrote it in 1948, and it was published the following year. He got the future date by flipping the 8 and the 4.

The colour red seemed to have an allure the other colours did not. He carefully opened it to read what was written in worried letters.

<!-- I daydreamed while someone talked to me again. Golden thoughts took me far away. The words faded into the background like the babble of a brook. The babble turned to laughter bringing me back to reality like the fear of a waterfall ahead. The talker had noticed my far-away look.

I was certainly a Grand Ol' Dreamer. -->

The journals all shared the beginning title, “The Grand Ol’ Dreamer” or “Gold.” There was gold in the chest after all. The VW was gold. As far as Sam could tell, Gold was not a relation. He was just a colourful old man without kids who had previously lived in Sam's house an unimportant large number of years past. If Gold had kids, would they not have inherited a box of books valuable enough to bury?

Colourful is a polite term because most kids think there is something inherently wrong with a person without children at least until they have kids themselves. All joking or plaisantant aside, having kids is, without question, the most important part of life. With the world so easily against one person, it would be nice to have a team of people on his or her side or at least with the genetic predisposition to be.

This gold was a cause of consternation and discussion between Sam’s father and mother. They decided that the best place for the fords would be the crawlspace. What an inauspicious space, all dirt, hardly a place for the Golden fords. Sam could not place the smell. Father called it the smell of rot. It was staleness at its worst, but the burning candles made everything smell all right. The P-U attacked the flame of a candle just like the candle attacked the need to say P-U.

It was also the boG space because it hid the books of Gold. The Benevolent One did not need to know. He was only concerned with the wellbeing of his subjects, and not about any book suspected to have led to the demise of the MT because it was not burned. The books could not affect his relationship with the Benevolent One whom Sam respected and loved very much. Coincidentally, the only people he ever heard

make disparaging remarks were sent far away. They were mainstreamed. This could not happen to Sam. He believed.

In the boG space, Sam would read the books by candlelight. The dark of the crawlspace made the light special. Opposites made the reading even more fun.

All Sam could think about was the boG space. If he were there, then it was truly off time. The spirit of travel contained in the books gave Sam hours of enjoyment. Sam lived in a place where a buried box full of video games would have meant nothing.

“Praise the Leader and praise always be yours to tender, how do you like your dried-up swamp?” His father asked on one occasion as he stuck his head into the crawlspace. The visits were usually that long.

“PtL and p-a-bytt, Father,” Sam returned.

“So was there anything good in the buried box?”

“Just books and writings by a writer called the Grand old dreamer or Gold for short.”

“So, the buried treasure had gold after all?”

“Yes, he also used the nom de plume, Albie Fine. He wanted to use Anon, but he was afraid of an old man hundreds of years old kicking his butt.”

Father laughed and then became serious, “He probably wanted to say I’ll be fine. In what you have read so far, did Gold mention the golden rule?”

“No, what is that?”

“The golden rule, or the Albie Fine rule, is a strategy to deal with life’s difficulties. You must treat others exactly how you, yourself, want to be treated.”

This was the best advice Dad gave me. I would later find out that this coincidentally was also a rule followed by the Grand Ol’ Dreamer.

Father continued, “The difficulty arises when one is faced by people who do not follow the golden rule. They expect to be treated well even though they treat others poorly. These people still must be treated with respect because dropping to their level and treating them poorly as the mirror principle dictates may feel good in the short run but is no way to act. A good Christian forgives his enemies according to Matthew 5:43-44<sup>115</sup>. ‘You have heard that it was said, ‘Love your neighbor and hate your enemy.’ But I tell you, love your enemies and pray for those who persecute you.’

“They must be treated with respect and indifference and weeded out of your life. Be rest assured, that these people are only making their life difficult and karma dictates that they will get their comeuppance from people just like them. The mirror principle reflects kindness back to you if you only emanate decency by avoiding being hateful and cold-hearted. The Golden rule is very important but you always must work hard and be true to yourself, do not be a slave and do not fight higher powers like God.”

Dad threw out that bit of parenting, gave himself a mental checkmark, and went back to his work. That was a puzzling statement. How could Sam fight something he could not see? Furthermore, there is slavery in the world only because the slaves have no choice. If they had a choice, would slavery not disappear? He went back to his reading.
